

Laboratory Activity #1 — Student Laboratory Packet

Relationships and Biodiversity*A Laboratory Activity for the Living Environment***Introduction**

Botana curus is a valuable plant because it produces Curol, a compound used for treating certain kinds of cancer. Curol cannot be produced in the laboratory. *Botana curus* grows very slowly and is on the endangered species list, so its ability to provide Curol in large quantities is limited.

Species that are more closely related to *Botana curus* are more likely to produce the important substance Curol. Three similar plant species that are plentiful (X, Y, and Z) may be related to *Botana curus*. You will work as a researcher to:

- gather structural and molecular evidence to determine which plant species is most closely related to the hypothetical species, *Botana curus*
- use this evidence to decide which plant species is most likely to serve as a source of the important substance Curol

Safety

- You will need to wear goggles while conducting Tests 4 and 5.
- Do not eat or drink anything in the laboratory while doing this laboratory activity.

Important Note: Record all of your data and answers on these laboratory sheets. You will need to keep them for review before the Regents Examination. Later, you will need to transfer your answers to a separate Student Answer Packet. Your teacher will use the packet in grading your work, and the school will retain it as evidence of your completion of the laboratory requirement for the Living Environment Regents Examination.

Structural Evidence for Relationships

Perform the following tests and record your observations in Table 1 on page 8 of this packet. Use a hand lens or microscope as needed.

Test 1-Structural Characteristics of Plants

- Do not remove the plant samples from the plastic bags/cards.
- Compare the structural characteristics of the plant samples. Record your observations in Table 1 (see page 8).

Test 2-Structural Characteristics of Seeds

- Do not remove the seed samples from the plastic bags/cards.
- Compare the structural characteristics of the seed samples. Record your observations in Table 1.

"Relationships and Biodiversity" is a laboratory activity produced by the State Education Department for use in fulfilling part of the laboratory requirement for the Regents Examination in Living Environment. Reproducing any part of this laboratory activity by other than New York State school personnel is illegal.

The road to restoration: A guide to identifying priorities and indicators for restoration monitoring Food and Agriculture Organization of the United Nations, World Resources Institute, 2019-11-29 This guide walks practitioners through seven questions to help them make decisions regarding restoration monitoring First practitioners are asked to determine their restoration goals land use and barriers to sustainability These choices are filtered by constraints and priorities so the practitioner will develop the indicators needed to setup their monitoring framework It provides a framework for identifying indicators Indicators are value laden measures of development performance designed to measure and calibrate progress Environmental indicators are used to provide synthesized knowledge on environmental issues and to highlight the extent of environmental trends They also help to reduce complexity provide important links between science and policy and help decision makers to provide guidance on environmental governance An indicator framework can provide a management tool to help countries develop implementation strategies and allocate resources accordingly to reach restoration goals Tracking progress with indicators can act as a report card to measure progress towards restoration and help ensure the accountability of all stakeholders for achieving the goals The guide uses country case studies to show how a practitioner could answer the questions offering a menu of potential indicators for measuring progress that other monitoring practitioners might find useful Next it highlights the different types of data that can feed into creating an indicator framework depending on resource constraints and information needs Some restoration programs may require fewer cost effective indicators that are collected locally Other programs may be able to integrate small locally collected data with big data from satellite imagery and social media
