Scientific Computation on Mathematical Problems and Conjectures Richard S. Varga, 1990-01-01 Studies the use of scientific computation as a tool in attacking a number of mathematical problems and conjectures In this case scientific computation refers primarily to computations that are carried out with a large number of significant digits for calculations associated with a variety of numerical techniques such as the second Remez algorithm in polynomial and rational approximation theory Richardson extrapolation of sequences of numbers the accurate finding of zeros of polynomials of large degree and the numerical approximation of integrals by quadrature techniques The goal of this

book is not to delve into the specialized field dealing with the creation of robust and reliable software needed to implement these high precision calculations but rather to emphasize the enormous power that existing software brings to the mathematician's arsenal of weapons for attacking mathematical problems and conjectures

Scientific Computation on Mathematical Problems and Conjectures includes studies of the Bernstein Conjecture of 1913 in polynomial approximation theory the 19 Conjecture of 1977 in rational approximation theory the famous Riemann Hypothesis of 1859 and the Polya Conjecture of 1927 The emphasis of this monograph rests strongly on the interplay between hard analysis and high precision calculations

e-O-Level Additional Mathematics Examination Notes Ee Teck Ee, 2013-02-20 This book is written for students who know that they are not doing well in Additional Mathematics and for students who do well but want to do even better The writer has gone through many Additional Mathematics syllabuses and examination papers He has taught for many years as a teacher and tutor He understands the difficulties many students face That is why the book is a very comprehensive summary of all the topics the student needs to learn and covers almost every area where questions will most likely be asked Use it as a reference book to supplement textbooks and teachers teachings or as a guide for quick revision Mastering mathematics taught in secondary schools does not require a genius The most important secret in learning mathematics is in understanding as much as possible what is being taught Your reasoning mind must be convinced You must refuse to be force fed Concepts definitions theorems procedures and symbols must be understood and not accepted blindly only to be regurgitated in homework and examinations They must not be scattered like fallen leaves on the soil of a sterile mind They must be connected to each other like luscious fruits in a bunch of grapes That is how the materials in this book are organized Many topics and methods which are not found elsewhere are explained in detail but a lot of what can already be found in every textbook is excluded Standard forms of formulae are grouped together for easy reference Study each chapter thoroughly before going to the next omitting chapters which are not included in your syllabus This book is a great help to students but it can never replace their relentless efforts If any student refuses to exert his mind then his failure is expected but it is entirely self inflicted Food must be ingested

digested and then absorbed assimilated and metabolized Mathematics topics once learned ingested and understood digested must be memorized absorbed associated and integrated with what one has learned before assimilated and put to use by constant practice metabolized Procedures which have already been justified to an inquiring mind must now become automatic in execution Mathematics is not a haphazard collection of formulas and theorems put together for the purpose of setting examination questions It is a supreme achievement of human creativity and ingenuity It is interesting challenging and useful It repays generously every one of its diligent students Passing examination is the least of its rewards **Olympiad Champs Mathematics Class 1 with Past Olympiad Questions 2nd Edition** Disha Experts, The thoroughly Revised Updated 2nd Edition of Olympiad Champs Mathematics Class 1 with Past Olympiad Questions is a complete preparatory book not only for Olympiad but also for Class 1 Mathematics The book is prepared on content based on National Curriculum Framework prescribed by NCERT This new edition has been empowered with Past Questions from various Olympiad Exams like IMO IOM GTSE etc in both the exercises of every chapter Further the book Provides engaging content with the help of Teasers Do You Know Amazing Facts Illustrations which enriches the reading experience for the children The questions are divided into two levels Level 1 and Level 2 The first level Level 1 is the beginner s level which comprises of questions like fillers analogy and odd one out The second level is the advanced level Level 2 comprises of techniques like matching chronological sequencing picture passage and feature based statement correct incorrect integer based puzzle grid based crossword Venn diagram table chart based and much more Solutions and explanations are provided for all questions
