E. Response Surface Methodology Kathleen M. Carley, 2004 Abstract There is P. Box, WISCONSIN UNIV MADISON., 1964 a problem faced by experimenters in many technical fields where in general the response variable of interest is y and there is a set of predictor variables x1 x2 x subscript k For example in Dynamic Network Analysis DNA Response Surface Methodology RSM might be useful for sensitivity analysis of various DNA measures for different kinds of random graphs and errors In Social Network Problems usually the underlying mechanism is not fully understood and the experimenter must approximate the unknown function g with appropriate empirical model y f x1 x2 x subscript k epsilon where the term epsilon represents the error in the system Usually the function f is a first order or second order polynomial This empirical model is called a response surface model Identifying and fitting from experimental data an appropriate response surface model requires some use of statistical experimental design fundamentals regression modeling techniques and optimization methods All three of these topics are usually combined into Response Surface Methodology RSM Also the experimenter may encounter situations where the full model may not be appropriate Then variable selection or model building techniques may be used to identify the best subset of regressors to include in a regression model In our approach we use the simulated annealing method of optimization for searching the best subset of regressors In some response surface experiments there can be one or more near linear dependences among regressor variables in the model Regression model builders refer to this as multicollinearity among the regressors Multicollinearity can have serious effects on the estimates of the model parameters and on the general applicability of the final model The RSM is also extremely useful as an automated tool for model calibration and validation especially for modern computational multi agent large scale social networks systems that are becoming heavily used in modeling and simulation of complex social networks The RSM can be integrated in many large

scale simulation systems such as BioWar ORA and is currently integrating in Vista Construct and DyNet This report describes the theoretical approach for solving of these problems and the implementation of chosen methods **Response Surface** Methodology in Quality Improvement** Raymond H. Myers, Virginia Polytechnic Institute and State University. Department of Statistics, 1990 **Empirical Model-Building and Response Surfaces** George E. P. Box, Norman R. Draper, 1987-01-16 An innovative discussion of building empirical models and the fitting of surfaces to data Introduces the general philosophy of response surface methodology and details least squares for response surface work factorial designs at two levels fitting second order models adequacy of estimation and the use of transformation occurrence and elucidation of ridge systems and more Some results are presented for the first time Includes real life exercises nearly all with solutions
