

Armature controlled dc servo motor and can be represented by block diagram as shown in fig below

Consider T. F of the system

$$G(s) = \theta(s) / V_a(s) = K_m / (Js^2 + fs) (Ra + sLa) \times K_b, K_f$$

Quantities involved in the above equation are J , R_a , L_a , K_m , and K_b . Out of this R_a and L_a can be determined by conventional method.

J (mechanical inertia) can be determined by retardation test. Now

$$E_b = K_b \omega = K_b 2\pi N / 60 \quad \text{----- (1)}$$

Electrical equivalent of mechanical power developed by motor = $E_b I_a$

$$E_b I_a = (2\pi N, T_m / 60) \quad \text{, substituting } E_b \text{ from (1)}$$

$$(K_b 2\pi N / 60) I_a = (2\pi N, T_m / 60) T_m$$

$$\text{But } T_m = K_t I_a \quad \text{----- from (2)}$$

$$(K_b 2\pi N / 60) I_a = (2\pi N, T_m / 60) K_t I_a$$

$$K_b = K_t$$

So the only unknown quantities are K_b and f

Determination of K_b and K_t

Back emf constant (K_b)

First the motor is run on no load at constant excitation. Various speeds at different applied voltages are noted down. Then graph is plotted showing back emf ($E_b = V_a - I_a R_a$) against speed. The slope of the curve gives K_b .

Volkmar, Lisa A. Wiesner, 2009-05-18 Autism is in the public spotlight now more than ever as new research and information appears almost daily Although in many ways this is a positive development it also presents challenges to families and practitioners who want to keep up with the latest developments and are left to sift through new information by themselves to see what is credible and relevant for them Each of us needs a personal research assistant who can determine which information we need to pay attention to and let us know how it might affect our daily work and the children we are living with or serve Since we each don't have our own research assistants on staff I am delighted to recommend this wonderful book by Fred Volkmar and Lisa Wiesner Both of these talented professional leaders have combined their scientific skills and understanding of the field with great practical experience and ideas about how research can be translated into clinical practice The result is a book that provides the best and most comprehensive information about recent scientific developments and a splendid practical guide for how they are being implemented and what we are learning in the process The issues are presented in all of their complexity but translated into language that is clear direct and easy to follow The format also lends itself to understanding the complex issues and their implications through excellent charts question and answer sections and chapters that vary from describing diagnostic issues to stating very specifically how to expand and evaluate the services one is receiving The comprehensive references and lists of additional resources also add greatly to the overall package As a professional dedicated to understanding scientific advances and helping families and teachers to utilize
