A Practical Guide to Price Index and Hedonic Techniques Ana M. Aizcorbe, 2014-06-12 This book provides an accessible guide to price index and hedonic techniques with a focus on how to best apply these techniques and interpret the resulting measures One goal of this book is to provide first hand experience at constructing these measures with guidance on practical issues such as what the ideal data would look like and how best to construct these measures when the data are less than ideal A related objective is to fill the wide gulf between the necessarily simplistic elementary treatments in textbooks and the very complex discussions found in the theoretical and empirical measurement literature Here the theoretical results are summarized in an intuitive way and their numerical importance is illustrated using data and results from existing studies Finally while the aim of much of the existing literature is to better understand official price indexes like the Consumer Price Index the emphasis here is more practical to provide the needed tools for individuals to apply these techniques on their own As new datasets become increasingly accessible tools like these will be needed to obtain summary price measures Indeed these techniques have been applied for years in antitrust cases that involve pricing where economic experts typically have access to large granular datasets

Glazed Panel Construction with Human-Robot Cooperation Seungyeol Lee, 2011-09-21 These days construction companies are beginning to be concerned about a potential labor shortage by demographic changes and an aging construction work force Also an improvement in construction safety could not only reduce accidents but also decrease the cost of the construction and is therefore one of the imperative goals of the construction industry These challenges correspond to the potential for Automation and Robotics in Construction as one of solutions Almost half of construction work is said to be material handling and materials used for construction are heavy and bulky for humans To date various types of robots have been developed for glazed panel construction Through the case studies on construction to which the robots were applied however we identified difficulties to be overcome In this study a human robot cooperative system is deduced as one approach to surmount these difficulties then considerations on

interactions among the operator robot and environment are applied to design of the system controller The human robot cooperative system can cope with various and construction environments through real time interaction with a human robot and construction environment simultaneously The physical power of a robot system helps a human to handle heavy construction materials with a relatively scaled down load Also a human can feel and respond to the force reflected from robot end effector acting with working environment Through the experiments and mock up tests with a prototype robot we observe the characteristics of the power assist and the force reflection the merits of the human robot cooperation system To apply human robot cooperative system at real construction sites Glazed Ceiling Panel Construction Robot is developed for the first time This robot is distinguished from other glazed panel construction robots because of the methods of lifting the panel to high installation positions and installing the fragile and bulk panel with robot force control After applying to real construction sites evaluation on the productivity of the developed robot was done by comparing and analyzing with the existing installation methods
