

# Questions

Below is a list of questions to be addressed as a result of this requirements document:

Question	Outcome
What about Google Apps	<ul style="list-style-type: none"><li>• We think this is important, but not for version one.</li><li>• We can look at this at a later stage.</li><li>• 💡 It might be worth someone looking into a shared notification library to do this.</li></ul>
Are we supporting Blackberry?	<ul style="list-style-type: none"><li>• Again, not for initial version - but we haven't had much demand for this.</li></ul>
Should we have an offline mode?	<ul style="list-style-type: none"><li>• We've talked about the pros and cons. In brief:<ul style="list-style-type: none"><li>➕ Seamless experience for customers, they won't notice if there is a connection issue</li><li>➕ Most of our competitors don't have this</li><li>➖ Could be expensive to build</li><li>❓ Should we spike this at a later sprint?</li></ul></li></ul>

## Not Doing

- Google Apps Authentication - out of scope, see above for details
- Blackberry support - we won't look at doing this, if demand picks up we can look at it.
- Native app. We are starting with a mobile web view first and get back to a native app depending on feedback that we get.

**Requirements Engineering for Software and Systems** Phillip A. Laplante, 2017-10-24 Solid requirements engineering has increasingly been recognized as the key to improved on time and on budget delivery of software and systems projects This textbook provides a comprehensive treatment of the theoretical and practical aspects of discovering analyzing modeling validating testing and writing requirements for systems of all kinds with an intentional focus on software intensive systems It brings into play a variety of formal methods social models and modern requirements for writing techniques to be useful to the practicing engineer This book was written to support both undergraduate and graduate requirements engineering courses Each chapter includes simple intermediate and advanced exercises Advanced exercises are suitable as a research assignment or independent study and are denoted by an asterisk Various exemplar systems illustrate points throughout the book and four systems in particular a baggage handling system a point of sale system a smart home system and a wet well pumping system are used repeatedly These systems involve application domains with which most readers are likely to be familiar and they cover a wide range of applications from embedded to organic in both industrial and consumer implementations Vignettes at the end of each

chapter provide mini case studies showing how the learning in the chapter can be employed in real systems Requirements engineering is a dynamic field and this text keeps pace with these changes Since the first edition of this text there have been many changes and improvements Feedback from instructors students and corporate users of the text was used to correct expand and improve the material This third edition includes many new topics expanded discussions additional exercises and more examples A focus on safety critical systems where appropriate in examples and exercises has also been introduced Discussions have also been added to address the important domain of the Internet of Things Another significant change involved the transition from the retired IEEE Standard 830 which was referenced throughout previous editions of the text to its successor the ISO IEC IEEE 29148 standard
