

HOW TO MAKE A RESEARCH POSTER: A GUIDE FOR STUDENTS

Many technologies and breakthroughs would not be possible without research. It is important to keep members of the community informed about the latest updates. One way to do that is through research posters.

01. INTRODUCTION

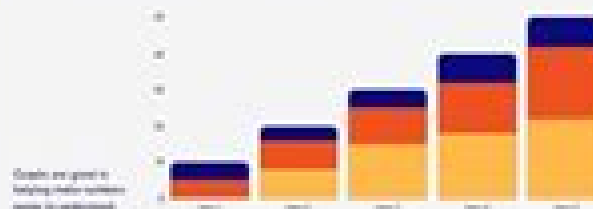

Posters are a popular method of presenting research findings to a broader and usually attending audience. They are commonly used at conferences and meetings. Start by introducing the subject of your research and/or your hypothesis. What are the questions about the topic that you want to answer? What do you hope you can contribute to the existing literature?

02. OBJECTIVE

It is important for your readers to know what you want to achieve with your research. State this as clear as possible.

05. ANALYSIS

Expand on your findings by discussing what methods were used to analyse your data. It can get technical or keep it simple and direct to the point. Use bullet points for emphasis. Include key graphs, tables, illustrations, and other images that support the study and show a clear analysis of the data. Make sure they are large enough to be seen from a distance but not clutter the poster.

Related Literature

It is important for your readers to know what you want to achieve with your research. State this as clear as possible.

03. METHODOLOGY

Let readers know how you did your study. Methods can vary depending on the subject or studies you want to use. These methods can include:

- Interviews
- Surveys
- Comparative studies
- Experiments

You can also present studies of existing theories that were used as references.

04. RESULTS/FINDINGS

Results show the outcome of the research and should answer the question or hypothesis stated in the introduction.

- State what you've found from your study.
- You can also list your findings in bullet points.

Summary

Start using any new methods that are using previous projects as a starting point.

06. CONCLUSION

Summarize your study and let the readers know how to move forward. You can also add a description of each that can give them an idea of what comes next. This section can also include any implications of the study, and if there are any actions or recommendations for future study.

Abstract

Be brief and to the point. And be sure to include the main findings of the study. Don't forget to include the author's name and contact information.

Acknowledgments

Thank any and all who helped you with your research. Let's not forget the people who helped you with your research.

There is a graph that will clearly explain the data in the study.

The illustration is a clear and concise way to show the data.
