people that they can lose weight without sacrificing the foods they love. However, this is only achieved by allowing dieters to have calories that should be consumed on healthy food with very small portions of potentially unhealthy food. This strategy gives the dieter a false sense of the real nutritional changes they need to make in their lives for long-term success. If one seriously wants to lose weight and keep it off, they need to think more comprehensively about the foods they eat without the confusing points scheme. With the old points system, you could use your points anyway you like. But we now know if you use your points wisely by eating foods rich in protein and fiber, these foods fill you up, keep hunger at bay, and help you lose weight in a healthier and more nutritious way.

lose weight not muscles

Proteins Proteins are the basic building blocks of every cell in your body. They are large compounds made of amino acids. In order to build, repair, or rebuild enzymes and muscles, your body needs amino acids that can only be derived from protein. Protein is essential for weight loss because you lose muscle mass first when you diet.

High Fiber Diet

Weight Control

Wonder One of the best side effects of eating a high fiber diet is that you may find it easier to maintain or even lose weight. According to the Harvard School of Public Health, most Americans get only 15 grams of dietary fiber a day when they should be getting anywhere from 20 to more than 30 grams.

Clinical Guide to Popular Diets Caroline Apovian, Elizabeth Brouillard, Lorraine Young, 2018-01-29. It is no secret that the United States is facing an obesity epidemic with the obesity rates continuing to rise year after year. According to the Center for Disease Control, one third of Americans are now obese. It is no longer sufficient to simply point out the health risks of obesity to our patients as the reason to lose weight. Patients are seeking guidance in terms of what specific diet plan to follow and what foods should be eaten. There are thousands of diets on the market with new ones introduced daily. Not all diet plans have proven results, nor will they work for every patient. More importantly, not all diets marketed to the public are safe to follow for an extended timeframe. In fact, research shows us that diet composition is not the key to long-term success, but compliance to a calorie deficient diet is the solution. So how does one choose which diet plan to recommend to patients?

Finally, a book for clinicians is here to help answer this question. This book provides information to help patients understand several different research-proven diets on the market today, including the Atkins diet, the DASH Diet, Dietary Approaches to Stop Hypertension diet, the I diet, the Mediterranean diet, Paleo Diets, South Beach, Vegetarian diets, Weight Watchers, and the Zone diet. Each diet is carefully and thoroughly reviewed in this book by some of America's top obesity medicine and weight management specialists to provide health practitioners a knowledge of the diet composition, current research, evaluating the diet, typical weight loss results, the pros and cons of the diet, as well as which patients would most benefit from each diet plan. This book provides the necessary tools for clinicians to feel comfortable discussing several of the more popular and scientifically researched diets with patients. This book offers solid information to advise patients based on their specific health history on which diet will afford the greatest chance for success.
