

## CURVED MIRRORS

### Concave mirrors

The inside of a spoon, the mirrors used in flash bulbs, car headlights are all examples of mirrors that curve inwards.

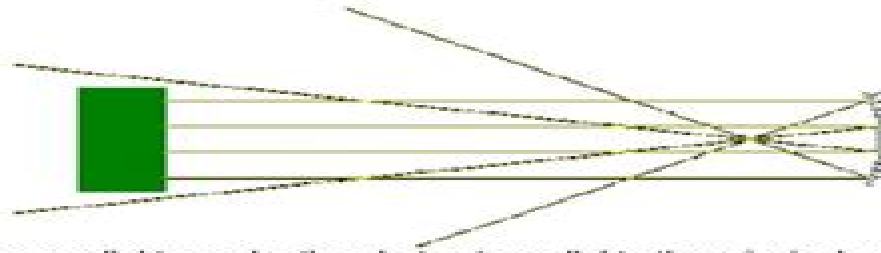

### Spherical Mirrors

Spherical mirrors are of two types, **concave** (converging) and **convex** (diverging). The centre of the sphere of which the mirror forms part of is called the **centre of curvature (C)**. The central point of the mirror is called the **pole (P)**. The line passing through the pole and the centre of curvature is called the **principal axis**. The **aperture (A)** is the diameter of the circular face of the mirror. The **radius of curvature (r)** is the distance between the pole and the centre of curvature. The **focal point or principal focus (F)** is the point, through which the rays of light parallel to the principal axis either pass or appear to pass. The **focal length (f)** is the distance between the pole and the focal point. The radius of curvature is always twice the focal length. That is:  $r = 2f$

### Parallel Rays

Rays of light striking an object, from a source an infinite distance away will be parallel to each other.

If the rays of light are parallel to each other, but not parallel to the principal axis, the image will not be at the principal focus, but will be in the focal plane. That is the plane perpendicular to the principal axis and passing through the principal focus.

The line from the centre of curvature to a point on the mirror is perpendicular to the mirror at that point. Thus it is the normal at that point. So, if necessary, to complete the diagram, use the second law of reflection of light.

### Describing images

Images are described by

- **Nature** is the image real or virtual
- **Orientation** is the image upright or inverted
- **Position** where is it in relation to the pole of the mirror
- **Size** (what is the height of the image) and magnification.

### Locating images

We use a technique called 'ray tracing' to predict where a curved mirror will form an image, and to find the size and type of that image. Ray tracing requires us to draw a diagram, showing the curved mirror in cross-section.
