

Greater insight and confidence in finding and treating the problem

When you're treating a difficult comminuted fracture or other challenging procedures, you don't want to lose time on adjusting a blurred image. The iW'studio quickly gives you the best fluoroscopic images available the first time. And our real pulsed fluoroscopy mode provides excellent quality images at half the dose of normal fluoroscopy.

Get superb images, even after time

With so many well complex repairs, orthopedic imaging presents unique challenges for imaging systems. The iW'studio features 16 x 16 high-resolution digital imaging chain with an array of powerful image processing functions. Philips' frameless motion-reduced noise reduction and 3D edge enhancement provides you with high-quality images to reveal the intricacies of orthopedic injuries and disorders. It supports you in quickly resolving complex bone structures in and in the precise positioning of implants.

Consistent imaging even when metal is present in FOV

Artifacts from metal objects such as orthopedic implants can be problematic during X-ray imaging because of the dark bands or streaks across the image caused by the effects of the metal on X-rays. These metal artifacts can hide essential structures and pathology, hindering visualization and reducing diagnostic confidence. The iW'studio includes our Penetration feature which automatically adjusts the contrast and brightness of images to improve image quality when metal objects are present in the field of view without impairing the FOV's dose.

More imaging power

Our highly efficient X-ray components give you the power to go the distance in longer studies without overheating. Thanks to our exceptional heat management capabilities. The result is lower delays and longer performance, even after hours. Plus, our advanced automatic high penetration mode gives you full control for the toughest projections like lateral hip views.

True, consistent imaging

High quality images are available too thanks to Philips' unique Redigene® columns, which deliver consistently superb image contrast. It tracks and precisely defines the field of view to ensure – no matter where it is in the image – excellent Consistent Imaging of dense and complex anatomy is much easier with iW'studio thanks to our Digital Exposure and High Definition Fluoroscope modes.

The iW'studio's high quality fluoroscopy images give the users of your system working a hand in to give the best results when performing complex orthopedic repairs.
