Natural Fiber Textile Composite Engineering Magdi El Messiry, 2017-07-06 Natural Fiber Textile Composite Engineering sheds light on the area of the natural fiber textile composites with new research on their applications the material used the methods of preparation the different types of polymers the selection of raw materials the elements of design the natural fiber textile polymer composites for a particular end use their manufacturing techniques and finally their life cycle assessments LCA The volume also addresses the important issue in the materials science of how to utilize natural fibers as an enhancement to composite materials Natural fiber reinforced polymer composites have been proven to provide a combination of superior mechanical property dielectric property and environmental advantages such as renewability and biodegradability Natural fibers some from agricultural waste products can replace existing metallic and plastic parts and help to alleviate the environmental problem of increasing amounts of agriculture residual The book is divided into four sections covering applications of natural fiber polymer composites design of natural fiber polymer composites composite manufacturing techniques and agriculture waste manufacturing composite material testing methods The first section of the book deals with the application of textile composites in the industry and the properties of the natural fibers providing an understanding of the history of natural fiber composites as well as an analysis of the different properties of different natural fibers The second section goes on to explain the textile composites their classification different composite manufacturing techniques and the different pretreatment methods for the natural fibers to be used in composite formation It also analyzes the composite material design under different types of loading and the mechanism of failure of the natural fiber composite The effect of the fiber volume fraction of different textile structures is explained The third section of the book on composite manufacturing techniques and agriculture waste manufacturing concerns the natural fiber composite manufacturing techniques agricultural waste and the methods of their preparation to be used successfully in the composite either in the form of fibers particles or nanoparticles

The book then considers the testing methods of the different composite components as well as the final composite materials giving the principle of the testing standards either destructive or nondestructive This book attempts to fill the gap between the role of the textile engineer and the role of the designer of composites from natural fibers It provides important information on the application of textile composites for textile engineers materials engineers and researchers in the area of composite materials

Prehistoric Textiles E. J.W. Barber, 2021-11-09 This pioneering work revises our notions of the origins and early development of textiles in Europe and the Near East Using innovative linguistic techniques along with methods from palaeobiology and other fields it shows that spinning and pattern weaving began far earlier than has been supposed Prehistoric Textiles made an unsurpassed leap in the social and cultural understanding of textiles in humankind's early history Cloth making was an industry that consumed more time and effort and was more culturally significant to prehistoric cultures than anyone assumed before the book's publication The textile industry is in fact older than pottery and perhaps even older than agriculture and stockbreeding It probably consumed far more hours of labor per year in temperate climates than did pottery and food production put together And this work was done primarily by women Up until the Industrial Revolution and into this century in many peasant societies women spent every available moment spinning weaving and sewing The author Elizabeth Wayland Barber demonstrates command of an almost unbelievably disparate array of disciplines from historical linguistics to archaeology and paleobiology from art history to the practical art of weaving Her passionate interest in the subject matter leaps out on every page Barber a professor of linguistics and archaeology developed expert sewing and weaving skills as a small girl under her mother's tutelage One could say she had been born and raised to write this book Because modern textiles are almost entirely made by machines we have difficulty appreciating how time consuming and important the premodern textile industry was This book opens our eyes to this crucial area of prehistoric human culture
