Deployment and Usage Guide for Running AI Workloads on Red Hat OpenShift and NVIDIA DGX Systems with IBM Spectrum Scale Simon Lorenz, Gero Schmidt, Thomas Schoenemeyer, IBM Redbooks, 2020-11-30 This IBM Redpaper publication describes the architecture installation procedure and results for running a typical training application that works on an automotive data set in an orchestrated and secured environment that provides horizontal scalability of GPU resources across physical node boundaries for deep neural network DNN workloads This paper is mostly relevant for systems engineers system administrators or system architects that are responsible for data center infrastructure management and typical day to day operations such as system monitoring operational control asset management and security audits This paper also describes IBM Spectrum LSF as a workload manager and IBM Spectrum Discover as a metadata search engine to find the right data for an inference job and automate the data science workflow With the help of this solution the data location which may be on different storage systems and time of availability for the AI job can be fully abstracted which provides valuable information for data scientists

Hands-On Neural Networks with TensorFlow 2.0 Paolo Galeone, 2019-09-18 A comprehensive guide to developing neural network based solutions using TensorFlow 2.0 Key Features Understand the basics of machine learning and discover the power of neural networks and deep learning Explore the structure of the TensorFlow framework and understand how to transition to TF 2.0 Solve any deep learning problem by developing neural network based solutions using TF 2.0 Book Description TensorFlow the most popular and widely used machine learning framework has made it possible for almost anyone to develop machine learning solutions with ease With TensorFlow TF 2.0 you'll explore a revamped framework structure offering a wide variety of new features aimed at improving productivity and ease of use for developers This book covers machine learning with a focus on developing neural network based solutions You'll start by getting familiar with the concepts and techniques required to build solutions to deep learning problems As you advance you'll learn how to create classifiers build object detection and semantic segmentation networks train generative models and speed up the development process using TF 2.0 tools such as TensorFlow Datasets and TensorFlow Hub By the end of this TensorFlow book you'll be ready to solve any machine learning problem by developing solutions using TF 2.0 and putting them into production What you will learn Grasp machine learning and neural network

techniques to solve challenging tasks Apply the new features of TF 2.0 to speed up development Use TensorFlow Datasets `tfds` and the `tf.data` API to build high efficiency data input pipelines Perform transfer learning and fine tuning with TensorFlow Hub Define and train networks to solve object detection and semantic segmentation problems Train Generative Adversarial Networks (GANs) to generate images and data distributions Use the SavedModel file format to put a model or a generic computational graph into production Who this book is for If you're a developer who wants to get started with machine learning and TensorFlow or a data scientist interested in developing neural network solutions in TF 2.0 this book is for you Experienced machine learning engineers who want to master the new features of the TensorFlow framework will also find this book useful Basic knowledge of calculus and a strong understanding of Python programming will help you grasp the topics covered in this book *Methods and Tools for Bioimage Analysis* Florian Levet, Florian Jug, Virginie
