

Chapter 4.

Vector Space

Vector spaces with real scalars are called *real vector spaces* and those with complex scalars are called *complex vector spaces*. For now, we will be concerned exclusively with real vector spaces.

4.1 Real Vector Spaces

Let V be a nonempty set of objects, on which two operations are defined:

- a) Addition
- b) Multiplication by scalars

With the following properties:

1. If \vec{u} and \vec{v} are elements in V , then $\vec{u} + \vec{v}$ is in V . (**V is closed under addition**)
2. $\vec{u} + \vec{v} = \vec{v} + \vec{u}$, for all \vec{u}, \vec{v} in V . (**holds Commutative Law**)
3. $\vec{u} + (\vec{v} + \vec{w}) = (\vec{u} + \vec{v}) + \vec{w}$ (**holds Associative Law**)
4. There is an object $\vec{0}$ in V , called the zero vector for V such that $\vec{0} + \vec{u} = \vec{u} + \vec{0} = \vec{u}$, for each \vec{u} in V . (**have Additive Identity**)
5. For each \vec{u} in V , there is an object $-\vec{u}$ in V , called a negative of \vec{u} , such that $\vec{u} + (-\vec{u}) = -\vec{u} + \vec{u} = \vec{0}$. (**have Additive Inverse**)
6. If k is any scalar and \vec{u} is any object in V , then $k\vec{u}$ is in V . (**Closed under Scalar Multiplication**).
7. $k(\vec{u} + \vec{v}) = k\vec{u} + k\vec{v}$
8. $(k + m)\vec{u} = k\vec{u} + m\vec{u}$
9. $k(m\vec{u}) = (km)\vec{u}$
10. $1\vec{u} = \vec{u}$ (**have Multiplicative Identity**)

then V is called a vector space and the objects in V are *vectors*.

Example 1: Let $V = R^2 = \{(x, y); x, y \in R\}$, prove that V is a vector space under the usual operations of addition and scalar multiplication defined by:

$$\vec{u} + \vec{v} = (u_1, u_2) + (v_1, v_2) = (u_1 + v_1, u_2 + v_2)$$

$$k\vec{u} = k(u_1, u_2) = (ku_1, ku_2)$$

Finite Dimensional Vector Spaces Paul R. Halmos, 1947-01-21 As a newly minted Ph D Paul Halmos came to the Institute for Advanced Study in 1938 even though he did not have a fellowship to study among the many giants of mathematics who had recently joined the faculty He eventually became John von Neumann s research assistant and it was one of von Neumann s inspiring lectures that spurred Halmos to write Finite Dimensional Vector Spaces The book brought him instant fame as an expositor of mathematics Finite Dimensional Vector Spaces combines algebra and geometry to discuss the three dimensional area where vectors can be plotted The book broke ground as the first formal introduction to linear algebra a branch of modern mathematics that studies vectors and vector spaces The book continues to exert its influence sixty years after publication as linear algebra is now widely used not only in mathematics but also in the natural and social sciences for studying such subjects as weather problems traffic flow electronic circuits and population genetics In 1983 Halmos received the coveted Steele Prize for exposition from the American Mathematical Society for his many graduate texts in mathematics dealing with finite dimensional vector spaces measure theory ergodic theory and Hilbert space **Topological Vector**

Spaces Alex P. Robertson, Wendy Robertson, 1980 Topological Vector Spaces H.H. Schaefer, Manfred P. H. Wolff, 1999-06-24 Intended as a systematic text on topological vector spaces this text assumes familiarity with the elements of general topology and linear algebra Similarly the elementary facts on Hilbert and Banach spaces are not discussed in detail here since the book is mainly addressed to those readers who wish to go beyond the introductory level Each of the chapters is preceded by an introduction and followed by exercises which in turn are devoted to further results and supplements in particular to examples and counter examples and hints have been given where appropriate This second edition has been thoroughly revised and includes a new chapter on C and W algebras Vector Spaces and Matrices in Physics M. C. Jain, 2001 The theory of vector spaces and matrices is an essential part of the mathematical background required by physicists Most books on the subject however do not adequately meet the requirements of physics courses they tend to be either highly mathematical or too elementary Books that focus on mathematical theory may render the subject too dry to hold the interest of physics students while books that are more elementary tend to neglect some topics that are vital in the development of physical theories In particular there is often very little discussion of vector spaces and many books introduce matrices merely as a computational tool Vector Spaces and Matrices in Physics fills the gap between the elementary and the heavily mathematical treatments of the subject with an approach and presentation ideal for graduate level physics students After building a foundation in vector spaces and matrix algebra the author takes care to emphasize the role of matrices as representations of linear transformations on vector spaces a concept of matrix theory that is essential for a proper understanding of quantum mechanics He includes numerous solved and unsolved problems and enough hints for the unsolved problems to make the book self sufficient Developed through many years of lecture notes Vector Spaces and

Matrices in Physics was written primarily as a graduate and post graduate textbook and as a reference for physicists Its clear presentation and concise but thorough coverage however make it useful for engineers chemists economists and anyone who needs a background in matrices for application in other areas [Vector Spaces; \[and\], Linear Transformations](#) Open University. Bourbaki,2013-12-01 This is a softcover reprint of the English translation of 1987 of the second edition of Bourbaki s *Espaces Vectoriels Topologiques* 1981 This second edition is a brand new book and completely supersedes the original version of nearly 30 years ago But a lot of the material has been rearranged rewritten or replaced by a more up to date exposition and a good deal of new material has been incorporated in this book all reflecting the progress made in the field during the last three decades Table of Contents Chapter I Topological vector spaces over a valued field Chapter II Convex sets and locally convex spaces Chapter III Spaces of continuous linear mappings Chapter IV Duality in topological vector spaces Chapter V Hilbert spaces elementary theory

Lectures on Real and Complex Vector Spaces Frank S. Cater, 1966 **Linear Vector Spaces and Cartesian Tensors** James Kenyon Knowles, 1998 Linear Vector Spaces and Cartesian Tensors is primarily concerned with the theory of finite dimensional Euclidian spaces It makes a careful distinction between real and complex spaces with an emphasis on real spaces and focuses on those elements of the theory that are especially important in applications to continuum mechanics The geometric content of the theory and the distinction between matrices and tensors are emphasized and absolute and component notation are both employed While the mathematics is rigorous the style is casual Chapter 1 deals with the basic notion of a linear vector space many examples of such spaces are given including infinite dimensional ones The idea of a linear transformation of a vector space into itself is introduced and explored in Chapter 2 Chapter 3 deals with linear transformations on finite dimensional real Euclidean spaces i.e Cartesian tensors focusing on symmetric tensors orthogonal tensors and the interaction of both in the kinetically important polar decomposition theorem Chapter 4 exploits the ideas introduced in the first three chapters in order to construct the theory of tensors of rank four which are important in continuum mechanics Finally Chapter 5 concentrates on applications of the earlier material to the kinematics of continua to the notion of isotropic materials to the concept of scalar invariant functions of tensors and to linear dynamical systems Exercises and problems of varying degrees of difficulty are included at the end of each chapter Two appendices further enhance the text the first is a short list of mathematical results that students should already be familiar with and the second contains worked out solutions to almost all of the problems Offering many unusual examples and applications Linear Vector

Spaces and Cartesian Tensors serves as an excellent text for advanced undergraduate or first year graduate courses in engineering mathematics and mechanics Its clear writing style also makes this work useful as a self study guide

Topological Vector Spaces I Gottfried Köthe,2011-11-15 It is the author s aim to give a systematic account of the most im portant ideas methods and results of the theory of topological vector spaces After a rapid development during the last 15 years this theory has now achieved a form which makes such an account seem both possible and desirable This present first volume begins with the fundamental ideas of general topology These are of crucial importance for the theory that follows and so it seems necessary to give a concise account giving complete proofs This also has the advantage that the only preliminary knowledge required for reading this book is of classical analysis and set theory In the second chapter infinite dimensional linear algebra is considered in comparative detail As a result the concept of dual pair and linear topologies on vector spaces over arbitrary fields are intro duced in a natural way It appears to the author to be of interest to follow the theory of these linearly topologised spaces quite far since this theory can be developed in a way which closely resembles the theory of locally convex spaces It should however be stressed that this part of chapter two is not needed for the comprehension of the later chapters

Chapter three is concerned with real and complex topological vector spaces The classical results of Banach's theory are given here as are fundamental results about convex sets in infinite dimensional spaces **A Vector Space Approach to Geometry** Melvin Hausner, 1998-01-01 This examination of geometry's correlation with other branches of math and science features a review of systematic geometric motivations in vector space theory and matrix theory more 1965 edition **Dual Vector Space** Jess Notley, 2021-05-04 The book introduces physics knowledge It is starting with an accurate approximation of the Displacement constant we map its mathematical relationship to all physical constants by creating a system of physical vectors The author defines the system of physical vectors as a new vector space called Constant Space **Topological Vector Spaces, Distributions and Kernels** Francois Trèves, 2006-01-01 Extending beyond the boundaries of Hilbert and Banach space theory this text focuses on key aspects of functional analysis particularly in regard to solving partial differential equations 1967 edition
