Evaluation of the Department of Veterans Affairs Mental Health Services National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee to Evaluate the Department of Veterans Affairs Mental Health Services, 2018-03-29 Approximately 4 million U S service members took part in the wars in Afghanistan and Iraq Shortly after troops started returning from their deployments some active duty service members and veterans began experiencing mental health problems Given the stressors associated with war it is not surprising that some service members developed such mental health conditions as posttraumatic stress disorder depression and substance use disorder Subsequent epidemiologic studies conducted on military and veteran populations that served in the operations in Afghanistan and Iraq provided scientific evidence that those who fought were in fact being diagnosed with mental illnesses and experiencing mental health related outcomes in particular suicide at a higher rate than the general population This report provides a comprehensive assessment of the quality capacity and access to mental health care services for veterans who served in the Armed Forces in Operation Enduring Freedom Operation Iraqi Freedom Operation New Dawn It includes an analysis of not only the quality and capacity of mental health care services within the Department of Veterans Affairs but also barriers faced by patients in utilizing those services

Government Accountability Office,2006 Metadata-driven Software Systems in Biomedicine Prakash M. Nadkarni,2011-05-27 While the use of database technology is ubiquitous throughout IT and health IT in particular it is not generally appreciated that as a database increases in scope certain designs are far superior to others In biomedical domains new knowledge is being generated continually and the databases that must support areas such as clinical care and research must also be able to evolve while requiring minimal or no logical physical redesign Appropriately designed metadata and software designed to utilize it effectively can provide significant insulation against change Many of the larger EMR or clinical research database vendors have realized this but their designs are proprietary and not described in the literature Consequently numerous misconceptions abound among individuals who have not had to work with large scale biomedical systems and graduates of a health or bioinformatics program may find that they need to unlearn what they were taught in database and software design classes in order to work productively with such systems A working knowledge of such systems is also important for individuals who are not primarily software developers such as health informaticians medical information officers and data analysts This book is in a sense intended to prepare all of the above individuals for the real world Guide to U.S. Government Publications Donna Batten,2006-09 **Returning Home from Iraq and Afghanistan** Institute of Medicine,Board on the Health of Select Populations,Committee on the Assessment of Readjustment Needs of Military Personnel, Veterans, and Their Families,2013-04-12 As of December 2012 Operation Enduring Freedom OEF in Afghanistan and Operation Iraqi Freedom OIF in Iraq have resulted in the deployment of about 2 2 million troops there have been 2 222 US fatalities in OEF and Operation New Dawn OND 1 and 4 422 in OIF The numbers of wounded US troops exceed 16 000 in Afghanistan and 32 000 in Iraq In addition to deaths and morbidity the operations have unforeseen consequences that are yet to be fully understood In contrast with previous conflicts the all volunteer military has experienced numerous deployments of individual service members has seen increased deployments of women parents of young children and reserve and National Guard troops and in some cases has been subject to longer deployments and shorter times at home between deployments Numerous reports in the popular press have made the public aware of issues that have pointed to the difficulty of military personnel in readjusting after returning from Iraq and Afghanistan Many of those who have served in OEF and OIF readjust with few difficulties but others have problems in readjusting to home reconnecting with family members finding employment

and returning to school In response to the return of large numbers of veterans from Iraq and Afghanistan with physical health and mental health problems and to the growing readjustment needs of active duty service members veterans and their family members Congress included Section 1661 of the National Defense Authorization Act for fiscal year 2008 That section required the secretary of defense in consultation with the secretary of veterans affairs to enter into an agreement with the National Academies for a study of the physical health mental health and other readjustment needs of members and former members of the armed forces who were deployed in OIF or OEF their families and their communities as a result of such deployment The study consisted of two phases The Phase 1 task was to conduct a preliminary assessment The Phase 2 task was to provide a comprehensive assessment of the physical psychologic social and economic effects of deployment on and identification of gaps in care for members and former members their families and their communities The Phase 1 report was completed in March 2010 and delivered to the Department of Defense DOD the Department of Veterans Affairs VA and the relevant committees of the House of Representatives and the Senate The secretaries of DOD and VA responded to the Phase 1 report in September 2010 Returning Home from Iraq and Afghanistan Assessment of Readjustment Needs of Veterans Service Members and Their Families fulfills the requirement for Phase 2 **Commerce Business Daily** ,2000-12
