beginning at their murky split from the reptiles in the Carboniferous period over three hundred million years ago They made the world theirs long before the rise of dinosaurs Travelling forward into the Permian and then Triassic periods we learn how our ancient mammal ancestors evolved from large hairy beasts with accelerating metabolisms to exploit miniaturisation which was key to unlocking the traits that define mammals as we now know them Elsa criss crosses the globe to explore the sites where discoveries are being made and meet the people who make them In Scotland she traverses the desert dunes of prehistoric Moray where quarry workers unearthed the footprints of Permian creatures from before the time of dinosaurs In South Africa she introduces us to animals once called mammal like reptiles that gave scientists the first hints that our furry kin evolved from a lineage of egg laying burrowers In China new complete fossilised skeletons reveal mammals that were gliders shovel pawed Jurassic moles and flat tailed swimmers This book radically reframes the narrative of our mammalian ancestors and provides a counterpoint to the stereotypes of mighty dinosaur overlords and cowering little mammals It turns out the earliest mammals weren't just precursors they were pioneers
