In this eBook, you will find 19 cutting-edge papers from the Research Topic Recent Advancements in Structural Equation Modeling SEM. These 19 papers cover a wide variety of topics related to SEM, including: a) analysis of different types of data from cross-sectional data with floor effects to complex survey data and longitudinal data; b) measurement-related issues from the development of new scales to the evaluation of person fit and new ways to test measurement invariance; and c) technical advancement and software development. We hope that the readers will gain new perspectives and be able to apply some of the new techniques and models discussed in these 19 papers.
