

MARK SCHEME for the May/June 2010 question paper
for the guidance of teachers.

5070/42

5070 CHEMISTRY

Paper 4 (Alternative to Practical), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners make judgements on answers. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Marks schemes must be read in conjunction with the question papers and the report on the examination.

CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2010 question papers for most IGCSE, GCE, Advanced Level and Advanced Subsidiary Level subjects and some Ordinary Level subjects.

Thermochemical Conversion of Biomass to Liquid Fuels and Chemicals Mark Crocker, 2010-09-10 There is increasing recognition that low cost high capacity processes for the conversion of biomass into fuels and chemicals are essential for expanding the utilization of carbon neutral processes reducing dependency on fossil fuel resources and increasing rural income While much attention has focused on the use of biomass to produce ethanol via fermentation high capacity processes are also required for the production of hydrocarbon fuels and chemicals from lignocellulosic biomass In this context this book provides an up to date overview of the thermochemical methods available for biomass conversion to liquid fuels and chemicals In addition to traditional conversion technologies such as fast pyrolysis new developments are considered including catalytic routes for the production of liquid fuels from carbohydrates and the use of ionic liquids for lignocellulose utilization The individual chapters written by experts in the field provide an introduction to each topic as well as describing recent research developments
