**Concept Car Year in Review** Automotive Engineering International, 2013-12-13 The concept and prototype cars that are shown at major industry events feature cutting edge technologies that the automotive industry wishes to preview. Often these technologies make an appearance in future production models. Concept Car Year in Review 2013 provides insight to the key engineering ideas that were introduced in concept and prototype cars during that year. This full color book includes articles that were previously published and written by the award winning editors of Automotive Engineering International about these concept cars. This book provides a preview of the technologies we could experience in our vehicles in the future. It gives the reader an inside glimpse of how new ideas for vehicles are formed and how they are implemented into the cars we drive. Published for enthusiasts who are interested in future car models and their technologies as well as practicing automotive engineers who are interested in new engineering trends such as hybrid systems, powertrain designs, automotive design, lightweighting and materials, and new engineers who want an overview of future trends. Concept Car in Review 2013 also provides one place where readers can find information on key engineering trends over one year. Allows readers to easily find specific car models or read about all of them. Includes interviews with engineering innovators who pioneer technologies in concept cars. Features many large full color images and an attractive magazine format.

**The Big Book of Tiny Cars** Russell Hayes, 2021-12-21 The Big Book of Tiny Cars presents entertaining profiles of automotive history's most famous and infamous microcars and subcompacts from 1901 to today. Illustrated with photos and period ads. *Autocar*, 2006

**The Innovation Odyssey** Christophe Midler, Marc Aloch, Christophe De Charentenay, 2023-04-21 Affordable is not typically the first adjective used to describe an electric automobile. This book traces the history of an affordable electric car from its genesis to its marketing. This history is more than a singular adventure. It is the analysis of a project that allows us to understand the key issues of strategy and management of contemporary innovation. The book features lessons in Strategy revealing the complexity of international product development and the conditions for its implementation in today's fragmented world. Project management showing what is required to succeed in the a priori impossible challenge of a design within an alliance between five partners from four different countries. Innovation demonstrating that the electrification of mobility can be combined with affordable prices. Industrial policy using the emblematic domain of electric vehicles to illustrate the major role of public authorities in technology, the future direction of this role and the importance in the competition between Western and Chinese industries. Intrapreneurship showing that a start up is not the only context in which it is possible to attempt and experience breakthroughs.
