

### Needle Penetration

After having completed the above adjustments, the needle penetration should be adjusted.

Rotate the flywheel by hand until needle actuating rod, 2, intersects the centre line of the knottier shaft as shown. At this position, the needles are at their maximum penetration.

Measure the distance X between the upper twine disc and the centre of the upper needle roll. This distance should be  $X = 130 \pm 3 \text{ mm}$  ( $5 \frac{1}{8}'' \pm 1/8''$ ).

To adjust this distance, proceed as follows:

1. Loosen nuts, 3, on both sides of the baler.
2. Turn needle actuating rods, 2, to lengthen or shorten the rods to obtain the correct distance X.
3. Tighten nuts, 3, to 100 N-m (74 ft. lbs.).

### CAUTION

When the maximum penetration of the needles is adjusted, always adjust the needle protection linkage as described further in this section before running the baler at full p.t.o. speed.
