ANNUAL EQUIPMENT INVENTORY PROCEDURES

Annual Inventory Overview

The annual inventory period is from October 1 through March 16 during each fiscal year. During this period, each department is required to perform a 100% audit of its GT tagged equipment.

For a department's annual inventory to be considered complete, the department's assigned Property Coordinator must submit the following packet of information to Property Control:

1. Annual Inventory Sign-off Form (including Chain/Department Head approval signature)
2. Manual mark-ups of the 370A – GT Annual Inv Report (report converted into Excel will be accepted)
 - a. Mark-ups should show that each asset was "found" or "missing" and indicate changes to location or room numbers. Issues concerning assets that were previously surplus or traded-in should be resolved before submitting the packet.
3. Missing report from PeopleSoft.
 - a. This report validates the assets indicated as missing were flagged as missing in PeopleSoft.

The annual inventory process, annual inventory sign-off form and troubleshooting checklist can be found at the following website:

http://www.procurement.gatech.edu/property_control_forms.php

For any questions regarding this process, please contact your designated Property Control Coordinator.

After completion of the inventory or the inventory period, Property Control will perform a random sample inventory for selected departments. The purpose of the sample is to verify the completion of the inventory process for the upcoming audit season with the state auditors. The results from the sample will be forwarded to the Vice President Campus Services of the University.

Groundwater Remediation

Nicholas P. Cheremisinoff,2017-06-13 Written by one of the world s foremost authorities on the subject this is the most comprehensive and in depth treatment available to environmental engineers and scientists for the remediation of groundwater one of the earth s most precious resources Groundwater is one of the Earth s most precious resources We use it for drinking bathing and many other purposes Without clean water humans would cease to exist Unfortunately because of ignorance or lack of caring groundwater is often contaminated through industrialization construction or any number of other ways It is the job of the environmental engineer to remediate the contaminated groundwater and make what has been tainted safe again Selecting the proper remediation strategy and process is the key to moving forward and once this process has been selected it must be executed properly taking into consideration the costs the type of contaminants that are involved time frames and many other factors This volume provides a broad overview of the current and most widely applied remedial strategies Instead of discussing these strategies in a generic way the volume is organized by focusing on major contaminants that are of prime focus to industry and municipal water suppliers The specific technologies that are applicable to the chemical contaminants discussed in different chapters are presented but then cross referenced to other chemical classes or contaminants that are also candidates for the technologies The reader will also find extensive cost guidance in this volume to assist in developing preliminary cost estimates for capital equipment and operations maintenance costs which should be useful in screening strategies The eight chapters cover all of the major various types of contaminants and their industrial applications providing a valuable context to each scenario of contamination This is the most thorough and up to date volume available on this important subject and it is a must have for any environmental engineer or scientist working in groundwater remediation

Collections Sandra Vanderwarf,Bethany Romanowski,2022-03-14 This two part text opens with an argument few collections practitioners would contest Regular inventories are central to meaningful sustainable and ethical collections preservation and access But Vanderwarf and Romanowski argue that in practice some 25 years working with diverse collections between them inventories are uncommon instead of functioning as a commonplace feature of collections care they tend to be evoked as a last resort when a museum has lost control of its collection Part I offers a flexible project management framework that illustrates strategies for reining in control of collections now From identifying objectives that best serve the collection in question to securing stakeholder support and planning time and resources Part I eliminates some guesswork around what may be an unprecedented and intensive project To maintain the benefits of a project style inventory the authors then encourage practitioners to embrace inventory as an ongoing evolving collections care function that reflects changing professional values and expectations from the communities museums serve By centering computerized databases barcoding and digital collections the authors further acknowledge these technologies as permanent evolving features of collections and inventory practice that merit increased resourcing Part II gives voice to practitioners around the world through case studies that affirm the vital role of inventories in regaining control of collections Some of these inventories occurred during the course of everyday work while others were responses to natural disasters and armed conflict Still others may be seen as expressions of social justice As much as the authors offer a guide to performing inventories thereby filling a longstanding gap in the literature they invite cultural heritage institutions to rethink how the stories held in collections can be better told and preserved through enhanced inventory practice The book will benefit seasoned museum collections practitioners as well as those who lack access to formal museology education and training The book targets stewards of cultural heritage and material culture collections with varying resources **Forms and Financials for the Medical Marijuana Industry** Scott V.
