

Call Center Strategies 2009

Improving Service Delivery

Assembling the right mix of resources to ensure high-quality, cost-effective customer care is a constantly evolving challenge. Selecting, training, managing, and motivating a large pool of employees requires creativity, enthusiasm, and perseverance. Determining the right combination of technology and personal touch is also a moving target as customer needs and expectations evolve. Many companies that have hit the mark have found it's even more challenging to stay on top.

With this in mind, the Ascent Group conducted its third annual call center benchmarking study to better understand how companies are managing inbound customer care. We asked companies to share their experiences to help us identify the practices that make or break a customer contact center. We also asked companies to provide performance benchmarks so we could identify "best performers"—companies providing the best service at the best cost. The results of this research are contained in our report, *Call Center Strategies 2009*. This is the Ascent Group's third annual benchmarking study of inbound call centers.

Research topics included:

- Call Center Benchmarking Comparisons by Industry
- First Call Resolution Performance
- Frontline Training Practices
- Supervisory Training
- Reward & Recognition Approaches
- Monitoring Call Quality
- IVR Performance

Call Center Benchmark Performance

We asked companies to report call center operational data so we could calculate several performance benchmarks. The following benchmark metrics were collected and calculated, based on participant feedback:

- Unit cost (cost per call – Operational & Maintenance costs only – direct labor, contractor costs, overtime, and non-labor O&M; no capital costs or overheads)
- % Abandoned calls (total calls handled versus total calls offered)
- % Call resolved on first contact (of total calls handled)
- Calls handled per FTE (per month)
- % Agent availability (time on phone or available to take calls)
- Service Level conformance (percent of days service level goals achieved)

Health Psychology Renato Pisanti,Anthony J. Montgomery,James Campbell Quick,2018-02-01 Over the last three decades a large body of research has showed that psychosocial job dimensions such as time pressure decision authority and social support could have significant implications for psychological distress and well being Theoretical models such as the job demand control social support model JDCA model the effort reward imbalance model ERI model the job demands resources model JDR model and the vitamin model suggest that distress and positive dimensions at work well being and motivation can be considered as two sides of the same coin If the job is designed to provide the right mix of psychosocial job dimensions e g optimal time pressure decision authority and social support work can boost job engagement and well being as well as productive behaviors at work When the job is not designed in an optimal way e g too much time pressure and too little decision authority work can trigger stress reactions and burnout Although some insight has been gained on how job dimensions could predict distress and well being and also into the dimensions that might moderate and mediate these associations research still faces several challenges Firstly most of this research has been cross sectional in nature thus making it difficult to conclude on the long term effects of psychosocial job dimensions Another challenge concerns how the contextual dimensions can be incorporated into micro levels models on employee stress and well being Nowadays work is carried out in the context of a wider environment that includes organizational variables So far the role of the organizational variables in the theoretical frameworks for explaining the relationships between psychosocial job dimensions employee distress and well being has often been underplayed The main aim of this research topic is to bring together international research from different theoretical and methodological perspectives in order to advance knowledge and practice in the field of work stress

Laboring Below the Line Frank Munger, 2002-04-25 As the distribution of wealth between rich and poor in the United States grew more and more unequal over the past twenty years this economic gap assumed a life of its own in the popular culture The news and entertainment media increasingly portrayed the lives of the poor with such stereotypes as the lazy welfare mother and the thuggish teen offering Americans few ways to learn how the other half really lives *Laboring Below the Line* works to bridge this gap by synthesizing a wide range of qualitative scholarship on the working poor The result is a coherent nuanced portrait of how life is lived below the poverty line and a compelling analysis of the systemic forces in which poverty is embedded and through which it is perpetuated *Laboring Below the Line* explores the role of interpretive research in understanding the causes and effects of poverty Drawing on perspectives of the working poor welfare recipients and marginally employed men and women the contributors an interdisciplinary roster of ethnographers oral historians qualitative sociologists and narrative analysts dissect the life circumstances that affect the personal outlook ability to work and expectations for the future of these people For example Carol Stack views the work aspirations of an Oakland teenager for whom a job is important even though it strains her academic performance And Ruth Buchanan looks at low wage telemarketing workers who are attempting to move up the economic ladder while balancing family education and other

important commitments What emerges is a compelling picture of low wage workers one that illustrates the precarious circumstances of individuals struggling with the economic conditions and institutions that surround them Each chapter also explores the capacity for economic survival from a different angle with ancillary commentary complementing the ethnographies with perspectives from other fields of study such as economics At this moment of governmental retrenchment ethnography s complex nonstereotypical portraits of individual people fighting against poverty are especially important Laboring Below the Line reveals the ambiguities of real lives the potential for individuals to change in unexpected ways and the even greater intricacy of the collective life of a community
