Burns, C.E., Richardson, B. & Brady, M.A. (2010). Pediatric Primary Care Case Studies. Sudbury, Massachusetts: Jones and Bartlett.

Maya Conteh is a 9 month old who comes to the clinic for an evaluation. She is accompanied by her mother who speaks Arabic and English. The mother expresses concern with Maya's development. The family emigrated from the Sudan 1 year ago and now lives in low income student housing because the father is in graduate school. This is their first child. The maternal grandparents are also temporarily living in the house and help with Maya.

Birth History: Maya was born 11 weeks early, weighing 2 lbs 8 oz. When Maya was just a few days old, she stopped breathing and was placed on a ventilator. After 24 hours she was able to breathe on her own. According to the mother, many tests were run on Maya, but the doctors could find nothing wrong. Maya spent 2 months in the hospital without incident and was discharged to home.

Mother reports: she noticed that Maya drooled a lot and choked easily with her bottle. Now she reports that Maya cannot hold her head up straight, roll or sit without support. She cries a lot and becomes stiff with rage. Mother reports no hospitalizations, surgeries or injuries since discharge.

Guided Participation in Pediatric Nursing Practice Karen

Pridham, Rana Limbo, Michele Schroeder, 2018-05-28 The first book about Guided Participation written for nurses. This authoritative publication delivers an in-depth examination of Guided Participation (GP), a dynamic process of teaching and learning that parents and guardians have used for generations to help their charges become self-reliant. GP is helping another person become competent by providing expertise working alongside the learner. For the nurse specifically, this means educating and working alongside parents and children within an environment that supports health. Consistent with client and family-centered practice, this fresh approach to nurse-client teaching is drawn from a broad span of disciplines including education, social and cultural anthropology, relationship-based attachment, caregiving theory, and developmental science. Written for students and practitioners who wish to incorporate GP into their practice and for managers, administrators, and policy makers who support its implementation, this resource demonstrates the value of GP as a new and emerging health care model that integrates care across health care settings. The text describes step-by-step how to practice GP, discusses support systems to maintain GP past the initial treatment, and includes abundant case studies, examples, and research findings. Chapters analyze how GP can promote health, prevent acute and chronic illness, and adjust old patterns of living and behaviors. Key Features: Includes
