Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed, and the only guide of its kind, *Resources for Teaching Middle School Science* will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.

Interest in environmental health research conducted with community participation has increased dramatically in recent years. In this book, Doug Brugge and H. Patricia Hynes relate experience of multiple community collaborations across the United States and highlight the lessons to be learned for those involved in or embarking on community collaborative research. The volume brings together a variety of cases examining the nature and form that the collaboration took, the scientific findings from the work, and the ethical issues that needed to be addressed. Actual cases covered include lead-contaminated soil, asthma, and housing conditions, the impact of development on environmental health, the impact of radiation hazards, urban gardening, hog farming, and diesel exhaust. The concluding section analyses the experiences of those involved and puts their findings into broader context. *Community Research in Environmental Health: Lessons in Science Advocacy and Ethics* provides a valuable guide for all those interested and involved in community research.      **Journal of Health, Physical Education, Recreation**, 1963      The Relationship Between Health and Environment Under the Lens of Climate Change: Insights for Policy Makers, Paolo Vineis, Greta Colombi, 2025-02-14.
