and lexicography three new dictionary features are developed. They cover three different cognitive semantic theories as well as three different parts of the monolingual dictionary entry each time for a new set of lexemes. Frame semantics, conceptual metaphor theory as well as cognitive conceptions of polysemy are used to create a new example section for agentive nouns, a new defining structure for emotion terms and a new microstructural arrangement for particle entries. Dictionary analyses on all as well as user studies on two of the features complement these suggestions. The monograph thus presents a new approach to lexicography that incorporates into its description of lexical items how humans perceive and conceptualise language.
