Teaching Evolution A Heuristic Study Of Personal And Cultural Dissonance:

Teaching Evolution Larry G. Grimes, 2012 COVID Ecology and Evolution: Systemic Biosocial Dynamics Matteo Convertino, Salvatore Flavio Pileggi, 2023-05-23 With the world in a state of emergency due to the Coronavirus pandemic almost the entire scientific community and all governmental intergovernmental agencies are focused on defining the most effective disease control and forecasting. However, is disease control the only or most crucial element to consider? In this Research Topic we intend to highlight crucially important topics about Coronavirus related to its environmental dependencies, biological diversity and stability, and socio-economic outcomes, considering also information modeling and technological aspects of the pandemic. The objective of the Research Topic is to bring together spatio-temporal biological, ecological, environmental, and social aspects of Coronavirus to better understand its dynamics, shifts, systemic impacts on health, and socio-economic effects. Studies via models that link Coronavirus to other viruses are welcome in order to properly characterize the biology, ecology, and environmental niche or universality of Coronavirus dynamics. We also seek prospective studies that investigate potential future spillovers of Coronavirus-like viruses by indicating risk hotspots in relation to socio-environmental determinants. Other issues focused on public health and medical aspects are welcome; however, these studies need to explicitly address the virus connection with the environment in order to gain insight into its ecology and evolution. Studies addressing data and modeling challenges, as well as different model approaches from machine learning to phenomenological and process-based models, have a lot of interest. Lastly, we highly encourage studies that quantitatively explore the coupled evolution of population perceptions and the associated infodemic, for instance, inferred from social media behavior and systemic health outcomes.

The MIT Encyclopedia of the Cognitive Sciences (MITECS) Robert A. Wilson, Frank C. Keil, 2001-09-04 Since the 1970s the cognitive sciences have offered multidisciplinary ways of understanding the mind and cognition. The MIT Encyclopedia of the Cognitive Sciences (MITECS) is a landmark comprehensive reference work that represents the methodological and theoretical diversity of this changing field. At the core of the encyclopedia are 471 concise entries from Acquisition and Adaptationism to Wundt and X-bar Theory. Each article, written by a leading researcher in the field, provides an accessible introduction to an important concept in the cognitive sciences, as well as references or further readings. Six extended essays, which collectively serve as a roadmap to the articles, provide overviews of each of six major areas of cognitive science: Philosophy, Psychology, Neurosciences, Computational Intelligence, Linguistics, and Language and Culture, Cognition and Evolution. For both students and researchers, MITECS will be an indispensable guide to the current state of the cognitive sciences.
