Human Flourishing in an Age of Gene Editing Erik Parens, Josephine Johnston, 2019-07-29 International uproar followed the recent announcement of the birth of twin girls whose genomes had been edited with a breakthrough DNA editing technology This technology called clustered regularly interspaced short palindrome repeats or CRISPR Cas9 can alter any DNA including DNA in embryos meaning that changes can be passed to the offspring of the person that embryo becomes Should we use gene editing technologies to change ourselves our children and future generations to come The potential uses of CRISPR Cas9 and other gene editing technologies are unprecedented in human history By using these technologies we eradicate certain dreadful diseases Altering human DNA however raises enormously difficult questions Some of these questions are about safety Can these technologies be deployed without posing an unreasonable risk of physical harm to current and future generations Can all physical risks be adequately assessed and responsibly managed But gene editing technologies also raise other moral questions which touch on deeply held personal cultural and societal values Might such technologies redefine what it means to be healthy or normal or cherished Might they undermine relationships between parents and children or exacerbate the gap between the haves and have nots The broadest form of this second kind of question is the focus of this book What might gene editing and related technologies mean for human flourishing In the new essays collected here an interdisciplinary group of scholars asks age old questions about the nature and well being of humans in the context of a revolutionary new biotechnology one that has the potential to change the genetic make up of both existing people and future generations Welcoming readers who study related issues and those not yet familiar with the formal study of bioethics the authors of these

essays open up a conversation about the ethics of gene editing. It is through this conversation that citizens can influence laws and the distribution of funding for science and medicine that professional leaders can shape understanding and use of gene editing and related technologies by scientists, patients and practitioners and that individuals can make decisions about their own lives and the lives of their families. *Christian Ethics and Biomedical Innovation* Stephen Goundrey-Smith, 2024-11-05

In *Christian Ethics and Biomedical Innovation* Stephen Goundrey Smith outlines a strategy for future adoption of human enhancement technologies which will ensure that such technologies are a common good, a strategy which is appropriate for a pluralistic society yet consistent with Christian ethical principles. Drawing on the history of biomedical innovation to date in pharmaceutical medicine, he argues that technological capability alone is not enough and that the responsible adoption of enhancement technologies will require active ethical deliberation and robust public policy discourse. Goundrey Smith argues that biomedical technology, ethics and public policy together form an essential triad for appropriate future enhancement technology adoption. This approach helps to ensure that biomedical technologies introduced will be common goods and to reduce the risk of their instrumental use. The use of any technology is closely linked to its sociopolitical and cultural context and drawing on Augustine's *The City of God*, Goundrey Smith presents a theological vision for good biomedical technology innovation in human society. *Mythologies of Transhumanism* Michael Hauskeller, 2016-11-09

This book examines the dependence of transhumanist arguments on the credibility of the narratives of meaning in which they are embedded. By taking the key ideas from transhumanist philosophy—the desirability of human self-design and immortality, the elimination of all suffering and the expansion of human autonomy—Michael Hauskeller explores these narratives and the understanding of human nature that informs them. Particular attention is paid to the theory of transhumanism as a form of utopia, stories of human nature, the increasing integration of the radical human enhancement project into the cultural mainstream and the drive to upgrade from flesh to machine.
