

Vertical Alignment

Mathe Solution

Part-1

Bangla Lecture

Vertical Alignment

Vertical alignment specifies the elevation of points along roadway. The elevation of these roadway points are usually determined by the need to provide an acceptable level of driver safety, driver comfort, cut to fill and proper drainage from rainfall runoff.

A primary concern in vertical alignment is establishing the transition of roadway elevations between two grades. This transition is achieved by means of a vertical curve.

Each roadway is uniquely defined by stationing (which is measured along a horizontal plane) and elevation.
