### 1. Introduction

In recent years, with the advent of the digital economy era with artificial intelligence, big data and other information technologies as the core, the working mode of accounting is undergoing great changes, and at the same time, it has had a huge impact on the traditional accounting teaching model. However, at present, the teaching content of cost accounting is lagging behind, the teaching methods and means are relatively simple, and the training of students' ability to use cost data for analysis and decision-making is neglected, which cannot meet the needs of the development of digital economy for talent training. Research-based teaching is a breakthrough in the existing traditional teaching mode, which enriches the teaching content with the research process and its results, which is conducive to developing students' potential and improving students' practical innovation ability to meet social needs. Therefore, how to constitute this accounting research-based teaching model is an important problem that needs to be solved urgently.

### 2. The Core Ideas and Characteristics of the Research-based Teaching Model

Since Alexander von Humboldt in Germany proposed the "combination of teaching and research" in the early 19th century, many universities have introduced scientific research methods into teaching, and gradually formed a research-based teaching model. The core idea of the research-based teaching model is to integrate teachers' research-based teaching with students' research-based learning, combine subject knowledge with research methods in the teaching process, inspire and encourage students to actively explore and think, and pay attention to cultivating students' ability to analyze problems independently and innovate. Compared with the traditional teaching mode based on the inheritance of knowledge, the research-based teaching model has its own unique characteristics, which are mainly manifested in the following three aspects.
