ABSTRACT

We find that individual investors who use technical analysis and trade options frequently make poor portfolio decisions, resulting in dramatically lower returns than other investors. The data on which this claim is based consists of transaction records and matched survey responses of a sample of Dutch discount brokerage clients for the period 2000–2006. Overall, our results indicate that individual investors who report using technical analysis are disproportionately prone to have speculation on short-term stock-market developments as their primary investment objective, hold more concentrated portfolios which they turn over at a higher rate, are less inclined to bet on reversals, choose risk exposures featuring a higher ratio of nonsystematic risk to total risk, engage in more options trading, and earn lower returns.

International Encyclopedia of Technical Analysis Joel G. Siegel, Jae K. Shim, Anique A. Qureshi, Jeffrey Brauchler, 2014-01-27 Investors are firmly entrenched in two camps: those who believe that economic and financial fundamentals are the keys to investment success and those who prefer some form or other of technical analysis. To serve those who use technical analysis, the authors have written a practical, useful and comprehensive guide to all the major and minor technical analysis systems used by today's investors and financial professionals. In this unique reference book, technical analysis systems are discussed in depth with detailed attention to the pros and cons of each. In addition, the Encyclopedia offers a mini dictionary of the terms, concepts and market issues that are part of the discipline of technical analysis.

Decision Economics: In the Tradition of Herbert A. Simon's Heritage Edgardo Bucciarelli, Shu-Heng Chen, Juan M. Corchado, 2017-06-13 The special session on Decision Economics (DECON) is a scientific forum held annually and intended to share ideas, projects, research results, models and experiences associated with the complexity of behavioural decision processes and socio-economic phenomena. DECON 2017 was held at the Polytechnic of Porto (ISEP, Portugal) as part of the 14th International Conference on Distributed Computing and Artificial Intelligence. For the second consecutive year, the Editors of this book have drawn inspiration from Herbert A. Simon's immense body of work and argue that Simon precipitated something akin to a revolution in microeconomics, focused on the concept of decision making. Further, it is worth noting that the recognition of relevant decision making takes place in a range of critical subject areas and research fields, including economics, finance, information systems, small and international business, management, operations and production. Therefore, decision making issues are of fundamental importance in all branches of economics, addressed both deductively and inductively. Not surprisingly, the study of decision making has seen growing empirical research efforts in the economic literature over the last sixty years, and more recently, a variety of insightful, cutting-edge experimental, behavioural and computational approaches. Additionally, the awareness regarding generalizations and reductions to express economic concepts has led, on the one hand, to an increasing risk of spreading the

language of mathematics as a rhetorical tool and on the other hand to an oversimplification and overlooking of some crucial details especially when it comes to human decisions and hence economic behaviour That awareness however has helped to produce an extraordinary volume of empirical research aimed at discovering how economic agents cope with complex decisions In this sense the international scientific community acknowledges Herbert A Simon s research endeavours to understand the processes involved in economic decision making and their implications for the advancement of economic professions Within the field of decision making indeed Simon s rejection of the standard decision making models used in neoclassical economics inspired social scientists worldwide to develop research programmes in order to study decision making empirically The main achievements concern decision making for individuals firms markets governments institutions and last but not least science and research
