Innovative Solutions and Practices* Simon K.S. Cheung, Jeanne Lam, Kam Cheong Li, Oliver Au, Will W.K. Ma, Wai Shing Ho, 2018-04-12 This book constitutes extended papers from the Third International Conference on Technology in Education ICTE 2018 held in Hong Kong China in January 2018 The 27 full papers presented in this volume were carefully reviewed and selected from 88 submissions They are organized in topical sections on new learning experience with technologies mobile learning and flipped classrooms instructional design and teaching practices learning administration with technologies     *Problems and New Solutions in the Boolean Domain* Bernd Steinbach, 2016-04-26 The Internet of Things is a great new challenge for the development of digital systems In addition to the increasing number of classical unconnected digital systems more people are regularly using new electronic devices and software that are controllable and usable by means of the internet All such systems utilize the elementariness of Boolean values A Boolean variable can carry only two different Boolean values FALSE or TRUE 0 or 1 and has the best interference resistance in technical systems However a Boolean function exponentially depends on the number of its variables This exponential complexity is the cause of major problems in the process of design and realization of circuits According to Moore's Law the complexity of digital systems approximately doubles every 18 months This requires comprehensive knowledge and techniques to solve complex Boolean problems This book summarizes both new problems and solutions in the Boolean domain in solving such issues Part 1 describes powerful new approaches in solving exceptionally complex Boolean problems Efficient methods contribute to solving problems of extreme complexity New algorithms and programs utilize the huge number of computing cores of the Graphical Processing Unit and improve the performance of calculations by several orders of magnitude Part 2 represents several applications of digital systems Due to the crucial role of the internet both solutions and open problems regarding the security of these systems are discussed The exploration of certain properties of such systems leads to a number of efficient solutions which can be reused in a wide field of applications Part 3 discusses the scientific basis of future circuit technologies investigating the need for completely new design methods for the atomic level of quantum computers This part also concerns itself with reversible circuits as the basis for quantum circuits and specifies important issues regarding future improvements     **OLAP Solutions** Erik Thomsen, 2002-10-15 OLAP enables users to access information from multidimensional datawarehouses almost instantly to view information in any way they like and to cleanly specify and carry out sophisticated calculations Although many commercial OLAP tools and products are now available OLAP is still a difficult and complex technology to master Substantially updated with expanded coverage of implementation methods for data storage access and calculation also new chapters added to combine OLAP with data warehouse mining and decision support tools Teaches the best practices for building OLAP models that improve business and

organizational decision making completely independent of commercial tools using revised case studies Companion Web site provides updates on OLAP standards and tools code examples and links to valuable resources *Handbook of Research on Wireless Multimedia: Quality of Service and Solutions* Cranley, Nicola, Murphy, Liam, 2008-07-31 This book highlights and discusses the underlying QoS issues that arise in the delivery of real time multimedia services over wireless networks Provided by publisher **Contemporary Challenges and Solutions in Applied Artificial Intelligence** Moonis Ali, Tibor Bosse, Koen V. R. Kerswell, 2005-09-19 An exciting new direction in hydrodynamic stability theory and the transition to turbulence is concerned with the role of disconnected states or finite amplitude solutions in the evolution of disorder in fluid flows This volume contains refereed papers presented at the IUTAM LMS sponsored symposium on Non Uniqueness of Solutions to the Navier Stokes equations and their Connection with Laminar Turbulent Transition held in Bristol 2004 Theoreticians and experimentalists gathered to

discuss developments in understanding both the onset and collapse of disordered motion in shear flows such as those found in pipes and channels The central objective of the symposium was to discuss the increasing amount of experimental and numerical evidence for finite amplitude solutions to the Navier Stokes equations and to set the work into a modern theoretical context The participants included many of the leading authorities in the subject and this volume captures much of the flavour of the resulting stimulating and lively discussions
