Synergies of Soft Computing and Statistics for Intelligent Data Analysis Rudolf Kruse, Michael R. Berthold, Christian Moewes, María Ángeles Gil, Przemysław Grzegorzewski, Olgierd Hryniewicz, 2012-09-13 In recent years there has been a growing interest to extend classical methods for data analysis. The aim is to allow a more flexible modeling of phenomena such as uncertainty, imprecision or ignorance. Such extensions of classical probability theory and statistics are useful in many real life situations since uncertainties in data are not only present in the form of randomness, various types of incomplete or subjective information have to be handled. About twelve years ago the idea of strengthening the dialogue between the various research communities in the field of data analysis was born and resulted in the International Conference Series on Soft Methods in Probability and Statistics (SMPS). This book gathers contributions presented at the SMPS 2012 held in Konstanz, Germany. Its aim is to present recent results illustrating new trends in intelligent data analysis. It gives a comprehensive overview of current research into the fusion of soft computing methods with probability and statistics. Synergies of both fields might improve intelligent data analysis methods in terms of robustness to noise and applicability to larger datasets while being able to efficiently obtain understandable solutions of real world problems.

Humor and Life Stress Herbert M. Lefcourt,Rod A. Martin,2012-12-06 This monograph reflects a culmination of influences Over a decade ago a graduate student at the University of Waterloo Dr Carl Sordoni had worked with one of the present authors H L to develop a dissertation concerned with humor At that time the literature on humor was scanty There was much that had been written by philosophers and scholars in literature But in psychology especially empirical research in psychology there was not an overwhelming literature to give substance to the belief that humor was an important element in human affairs Memories of that dissertation are fond The findings were disappointing but the execution of the research provided us with much hilarity Though the dissertation research did not pan out as we had hoped we had begun to look for the influence of humor in other investigations that we were conducting Two published studies from that era are described in this book one of which grew as an off shoot of a dissertation by Dr Paul Antrobus In these studies not only did we find evidence that humor could be predicted and understood within particular contexts but again we found enjoyment in doing the studies
