John S. Mead

Renault Fluence Ze Manual:

Advances in Stochastic Dynamic Programming for Operations Management Frank Schneider, 2014 Many tasks in operations management require the solution of complex optimization problems Problems in which decisions are taken sequentially over time can be modeled and solved by dynamic programming Real world dynamic programming problems however exhibit complexity that cannot be handled by conventional solution techniques This complexity may stem from large state and solution spaces huge sets of possible actions non convexities in the objective function and uncertainty In this book three highly complex real world problems from the domain of operations management are modeled and solved by newly developed solution techniques based on stochastic dynamic programming First the problem of optimally scheduling participating demand units in an energy transmission network is considered These units are scheduled such that total cost of supplying demand for electric energy is minimized under uncertainty in demand and generation Second the integrated problem of investment in and optimal operations of a network of battery swap stations under uncertain demand and energy prices is modeled and solved Third the inventory control problem of a multi channel retailer selling through independent sales channels is modeled and optimality conditions for replenishment policies of simple structure are proven This book introduces efficient approximation techniques based on approximate dynamic programming ADP and extends existing proximal point algorithms to the stochastic case The methods are applicable to a wide variety of dynamic programming problems of high dimension
