Time Saver For Building Types 3rd Edition:

Time-Saver Standards for Building Types: 3rd Edition M. Chusid, 1991 The 1st Edition of Time Saver Standards for Building Types has been an important part of my professional library since its publication in 1973 As stated in its preface It is intended to give basic design criteria for each major type of building It will give those unfamiliar with a specific building type a talking or working knowledge of its functions organization and major components Over the years I have referred to Time Saver frequently for planning and design guidelines for building types such as gymnasiums airport terminals and police stations But as the 1st Edition is now 17 years old and much of it is based on other even older versions of Time Saver Standards I have begun to find the book inadequate for contemporary design practice The past two decades have been a period of profound change for building planning and design Many building requirements have changed and entire new categories of buildings have evolved It was with enthusiasm that I looked forward to the 3rd Edition which the publisher promised would be revised expanded and completely brought up to date I am greatly disappointed with the result While the 3rd Edition has been expanded to approximately 1400 pages nearly a third more than the 1st Edition little of the original material has been revised and the updating has been insufficient

Time-saver Standards for Building Types Joseph De Chiara, 2001 Covers structures and places as diverse as residences museums libraries and theaters hospitals and nursing homes churches air and truck terminals retail shops restaurants hotels industrial parks playgrounds and arenas This is a worthy competitor to Architectural graphic standards It is illustrated with hundreds of plans diagrams tables and schematics which help in the design of more functional meaningful and interesting buildings De Chiara and Callender provide detailed information on the essential components of each building type emphasizing the characteristic functions involved This edition offers new information on facilities for such purposes as education justice and correction entertainment health and sports and recreation The book features special sections on housing for the elderly and the handicapped including access for the handicapped to public and government buildings

Environmental Regulations and Housing Costs Arthur C. Nelson, John Randolph, James M. McElfish, Joseph M. Schilling, Jonathan Logan, LLC Newport Partners, 2012-06-22 Many communities across the nation still lack affordable housing And many officials continue to claim that affordable housing is an oxymoron Building inexpensively is impossible

they say because there are too many regulations Required environmental impact statements and habitat protection laws they contend drive up the costs of construction But is this actually true In a comprehensive study of the question the authors of this eye opening book separate fact from myth With admirable clarity they describe the policy debate from its beginning review the economic theory trace the evolution of development regulation and summarize the major research on the topic In addition they offer their own research accompanied by a case study of two strikingly different Washington D C suburbs They also include results of focus groups conducted in Dallas Denver and Tucson The authors find that environmental regulatory costs as a share of total costs and processes are about the same now as they were thirty years ago even though there are far more regulations today They find too that environmental regulations may actually create benefits that could improve the value of housing Although they conclude that regulations do not appear to drive up housing costs more now than in the past they do offer recommendations of ways in which the processes associated with regulations including review procedures could be improved and could result in cost savings Intended primarily for professionals who are involved in or impacted by regulations from public officials planners and engineers to housing developers and community activists this book will provide useful insights and data to anyone who wants to know if and how American housing can actually be made affordable

Spaces in Architecture Bert Bielefeld, 2019-04-01 The design of a building is a complex process in which the architect develops spaces which are defined by a number of different parameters The most important of these are space requirements distances furniture and fittings and movement zones From the dimensions of the human body it is possible to derive guide values for these reference sizes that make spaces comfortable to be in and to use Spaces in Architecture is a useful reference work for students and designers for quickly looking up detailed information on space scenarios that occur in many different types of buildings For example the book lists all important dimensions for entrance areas doors staircases ramps and elevators On the basis of this fundamental information it is possible to design buildings in terms of function and type
