Electrochemical Engineering Across Scales Richard C. Alkire, Philip N. Bartlett, Jacek Lipkowski, 2015-02-09 In Volume XV in the series Advances in Electrochemical Science and Engineering various leading experts from the field of electrochemical engineering share their insights into how different experimental and computational methods are used in transferring molecular scale discoveries into processes and products Throughout the focus is on the engineering problem and method of solution rather than on the specific application such that scientists from different backgrounds will benefit from

the flow of ideas between the various subdisciplines A must read for anyone developing engineering tools for the next generation design and control of electrochemical process technologies including chemical mechanical and electrical engineers as well as chemists physicists biochemists and materials scientists *Augmentation of Brain Function: Facts, Fiction and Controversy* Ioan Opris, Manuel F. Casanova, Mikhail Lebedev ,2018-09-14 The Volume II is entitled Neurostimulation and pharmacological approaches This volume describes augmentation approaches where improvements in brain functions are achieved by modulation of brain circuits with electrical or optical stimulation or pharmacological agents Activation of brain circuits with electrical currents is a conventional approach that includes such methods as i intracortical microstimulation ICMS ii transcranial direct current stimulation tDCS and iii transcranial magnetic stimulation TMS tDCS and TMS are often regarded as noninvasive methods Yet they may induce long lasting plastic changes in the brain This is why some authors consider the term noninvasive misleading when used to describe these and other techniques such as stimulation with transcranial lasers The volume further discusses the potential of neurostimulation as a research tool in the studies of perception cognition and behavior Additionally a notion is expressed that brain augmentation with stimulation cannot be described as a net zero sum proposition where brain resources are reallocated in such a way that gains in one function are balanced by costs elsewhere In recent years optogenetic methods have received an increased attention and several articles in Volume II cover different aspects of this technique While new optogenetic methods are being developed the classical electrical stimulation has already been utilized in many clinically relevant applications like the vestibular implant and tactile neuroprosthesis that utilizes ICMS As a peculiar usage of neurostimulation and pharmacological methods Volume II includes several articles on augmented memory Memory prostheses are a popular recent development in the stimulation based BMIs For example in a hippocampal memory prosthesis memory content is extracted from hippocampal activity using a multiple input multiple output non linear dynamical model As to the pharmacological approaches to augmenting memory and cognition the pros and cons of using nootropic drugs are discussed **Ethical Innovation in Business and the Economy** Georges Enderle, Patrick E. Murphy, 2015-12-18 Innovation has become a buzzword that promises dramatic changes in almost every field of business Absent from this attention is a serious discussion of the ethical sides of dramatic change To address this editors Georges Enderle and Patrick E Murphy gather a team of experts to fully examine the ethics of innovation within business and the economy in this standout addition to the Studies in TransAtlantic Business Ethics series Distribution Planning and Control David Frederick Ross, 2015-05-14 This third edition provides operations management students academics and professionals with a fully up to date practical and comprehensive sourcebook in the science of distribution and Supply Chain Management SCM Its objective is not only to discover the roots and detail the techniques of supply and delivery channel networks but also to explore the impact of the merger of SCM concepts and information technologies on all aspects of internal business and supply channel management This textbook

provides a thorough and sometimes analytical view of the topic while remaining approachable from the standpoint of the reader. Although the text is broad enough to encompass all the management activities found in today's logistics and distribution channel organizations, it is detailed enough to provide the reader with a thorough understanding of essential strategic and tactical planning and control processes as well as problem-solving techniques that can be applied to everyday operations. *Distribution Planning and Control Managing in the Era of Supply Chain Management* 3rd Ed is comprised of fifteen chapters divided into five units. Unit 1 of the text, *The SCM and Distribution Management Environment*, sets the background necessary to understand today's supply chain environment. Unit 2, *SCM Strategies, Channel Structures, and Demand Management*, reviews the activities involved in performing strategic planning, designing channel networks, forecasting, and managing channel demand. Unit 3, *Inventory Management in the Supply Chain Environment*, provides an in-depth review of managing supply chain inventories, statistical inventory management, and inventory management in a multiechelon channel environment. Unit 4, *Supply Chain Execution*, traces the translation of the strategic supply chain plans into detailed customer and supplier management, warehousing, and transportation operations activities. Finally, Unit 5, *International Distribution and Supply Chain Technologies*, concludes the text by exploring the role of two integral elements of SCM: international distribution management and the deployment of information technologies in the supply chain environment. Each chapter includes summary questions and problems to challenge readers to their knowledge of concepts and topics covered. Additionally, supplementary materials for instructors are also available as tools for learning reinforcement.

This DVD contains a collection of papers presented at EnergyMaterials 2014, a conference organized jointly by The Chinese Society for Metals (CSM) and The Minerals Metals Materials Society (TMS) and held November 4-6, 2014, in Xi'an, Shaanxi Province, China. With the rapid growth of the world's energy production and consumption, the important role of energy materials has achieved worldwide acknowledgement. Material producers and consumers constantly seek the possibility of increasing strength, improving fabrication, and service performance, simplifying processes, and reducing costs. Energy Materials 2014 has provided a forum for academics, researchers, and engineers around the world to exchange state-of-the-art development and information on issues related to energy materials. The papers on the DVD are organized around the following topics: Materials for Coal-Based Systems, Materials for Gas Turbine Systems, Materials for Nuclear Systems, Materials for Oil and Gas, Materials for Pressure Vessels. Sense of Agency: Examining Awareness of the Acting Self Nicole David, James W Moore, Sukhvinder Obhi, 2015-07-24 The sense of agency is defined as the sense of oneself as the agent of one's own actions This also allows oneself to feel distinct from others and contributes to the subjective phenomenon of self consciousness Gallagher 2000 Distinguishing oneself from others is arguably one of the most important functions of the human brain Even minor impairments in this ability profoundly affect the individual's functioning in society as demonstrated by psychiatric and neurological syndromes involving agency disturbances Della Sala et al 1991 Franck et al 2001 Frith 2005 Sirigu et al 1999 But the sense of agency also plays a role for cultural and religious phenomena such as voodoo superstition and gambling in which individuals experience subjective control over objectively uncontrollable entities Wegner 2003 Furthermore it plays into ethical and law questions concerning responsibility and guilt For these reasons a better understanding of the sense of agency has been important for neuroscientists clinicians philosophers of mind and the general society alike Significant progress has been made in this regard For example philosophical scrutiny has helped establish the conceptual boundaries of the sense of agency Bayne 2011 Gallagher 2000 2012 Pacherie 2008 Synofzik et al 2008 and

scientific investigations have shed light on the neurocognitive basis of sense of agency including the brain regions supporting sense of agency Chambon et al 2013 David et al 2007 Farrer et al 2003 2008 Spengler et al 2009 Tsakiris et al 2010 Yomogida et al 2010 Despite this progress there remain a number of outstanding questions such as Are there cross cultural differences in the sense of agency How does the sense of agency develop in infants or change across the lifespan How does social context influence sense of agency What neural networks support sense of agency i e connectivity and communication between brain regions What are the temporal dynamics with respect to neural processes underlying the sense of agency i e the what and when of agency processing How can different cue models of the sense of agency be further specified and empirically supported especially with regards to cue integration weighting What are the applications of sense of agency research clinically engineering etc The concept of the sense of agency offers intriguing avenues for knowledge transfer across disciplines and interdisciplinary empirical approaches especially in addressing the afore mentioned outstanding questions The aim of the present research topic is to promote and facilitate such interdisciplinarity for a better understanding of why and how we typically experience our own actions so naturally and undoubtedly as ours and what goes awry when we do not We thus welcome contributions from for example i neuroscience and psychology including development psychology neuroscience ii psychiatry and neurology iii philosophy iv robotics and v computational modeling In addition to empirical or scientific studies of the sense of agency we also encourage theoretical contributions including reviews models and opinions

TMS and Neuroethics Veljko Dubljević, Jonathan R. Young, 2025-07-11 As transcranial magnetic stimulation TMS continues to expand from a tool of neuroscience research into a growing array of clinical applications it presents a number of open questions that both invite and complicate ethical evaluation Empirically supported concerns remain regarding interactions between TMS and psychiatric medications or other interventions the potential for adverse effects in stimulated brain regions and whether modulation of brain activity particularly via changes in oscillatory states might affect aspects of personhood This volume explores the ethical landscape surrounding TMS in both research and clinical settings Prior neuroethics literature has largely focused on theoretical implications of neurostimulation technologies including conceptual clarification e g invasiveness and normative questions regarding the alignment of these technologies with societal values However while some empirical work has captured perspectives from TMS patients many key voices such as those of family members clinicians and underrepresented communities have remained absent from scholarly discussions Spanning historical reflection theoretical debate empirical analysis and clinical insight this collection features contributions from scholars and practitioners working at the intersection of neuroethics neuroscience psychiatry and biomedical engineering Part I of the volume offers historical and theoretical reflections including the origins and growth of TMS research racial disparities in access and participation caregiver perspectives and emerging issues related to cognitive enhancement non clinical use and applications in social neuroscience and creativity Part II turns to new directions and ethical issues in clinical

TMS research addressing treatment subgrouping adolescent and geriatric use mood and substance use disorders suicidality and the evolving regulatory landscape Together these chapters provide an interdisciplinary examination of the ethical clinical and societal dimensions of TMS Whether as an introduction to the neuroethics of brain stimulation or as a resource for neuroscientists clinicians engineers and ethicists this volume aims to foster greater understanding and dialogue around the responsible development and application of TMS

Beyond the simple

contrastive analysis: Appropriate experimental approaches for unraveling the neural basis of conscious experience Jaan Aru, Talis Bachmann, 2015-06-26

Contrasting conditions with and without conscious experience has served consciousness research well. However, research based on this simple contrast has led to controversies about the neural basis of conscious experience. One key reason for these ongoing debates seems to be that the simple contrast between conditions with and without consciousness is not specific for unraveling the neural basis of conscious experience but rather also leads to other processes that precede or follow it. Acknowledging this methodological problem implies that some of the previous research findings about the neural underpinnings of conscious experience are actually reflecting the prerequisites and consequences rather than the direct correlates of conscious perception. Thus, it is required to re-evaluate the previous results to find out which of them are telling us anything about the neural basis of consciousness. But first and foremost to overcome this methodological problem, we need new experimental paradigms that go beyond the simple contrastive analysis or find the ways how some older but well forgotten paradigms may foster a new look at this emerging problem. Accordingly, this research topic is looking for empirical and theoretical contributions that 1) envision new and suitable experimental approaches to study consciousness that are free from the limitations of the simple contrastive analysis, 2) provide empirical data that help to separate the neural correlates of conscious experience from the prerequisites and consequences of it, 3) help to re-assess previous research findings about the neural correlates of conscious perception in the light of the methodological problems with the traditional contrastive analysis. We hope that the theoretical insights and experimental approaches collected within this Research Topic help us to gain a more refined understanding of the neural basis of conscious experience.
