

HR SERIES *Carburetor*

Introduction

The HR series diaphragm carburetor has been developed by the Tillotson Manufacturing Company for engines with a displacement of from 12 to 25 cubic inches per cylinder. It is available as a complete fuel system including carburetor, integral fuel pump and filter for two stroke cycle engines or as a carburetor and integral fuel filter for four stroke cycle engines.

The diaphragm controlled metering system allows precise fuel metering to the engine at extreme tilt angles and prevents fuel level changes due to vibration. The dual venturi used in this model series multiplies the venturi pressure drop causing fine atomization of the fuel that is delivered from the main fuel nozzle so that the fuel reaches the engine as a combustible fog instead of a fluid stream. The main benefit of this venturi system is increased power and fuel economy.

Designed with a minimum number of parts, this compact unit has retained the dependability and easy servicing features of the smaller Tillotson diaphragm carburetors that have been in use throughout the world for several years.

Information contained in the following pages is presented as an aid to understanding the construction, operation and servicing of the HR series carburetor.
