A Guidebook for the Preservation of Public-Use Airports Thomas P Thatcher, 2011 TRB's Airport Cooperative Research Program ACRP Report 44 A Guidebook for the Preservation of Public Use Airports describes why public use airports close and identifies measures and strategies that can be undertaken to potentially help preserve and prevent an airport closure

A Guidebook for Selecting Airport Capital Project Delivery Methods Ali Touran, 2009 Describes various project delivery methods for major airport capital projects The guidebook also evaluates the impacts advantages and disadvantages of these various project delivery methods The project delivery methods discussed include design bid build DBB construction manager at risk CMR and design build DB The guidebook offers a two tiered project delivery selection framework that may be used by owners of airport projects to evaluate the pros and cons of each delivery method and select the most appropriate method for their project Tier 1 is an analytical delivery decision approach that is designed to help the user understand the attributes of each project delivery method and whether the delivery method is appropriate for their specific circumstance Tier 2 uses a weighted matrix delivery decision approach that allows users to prioritize their objectives and based on the prioritized objectives select the delivery method that is best suited for their project The report will be helpful to airports with determining the most appropriate project delivery methods e.g. DBB DB or CMR for various types of airport capital projects

**Construction Manager-at-risk Project Delivery for Highway Programs** Douglas D. Gransberg, Jennifer Sue Shane, 2010. TRB's National Cooperative Highway Research Program NCHRP Synthesis 402. Construction Manager at Risk Project Delivery for Highway Programs explores current methods in which state departments of transportation and other public engineering agencies are applying construction manager at risk (CMR) project delivery to their construction projects. CMR project delivery is an integrated team approach to the planning, design and construction of a highway project to help control schedule and budget and to help ensure quality for the project owner. The team consists of the owner, the designer who might be an in-house engineer and the at-risk construction manager. The goal of this project delivery method is to engage at-risk construction expertise early in the design process to enhance constructability, manage risk and facilitate concurrent execution of design and construction without the owner relinquishing control over the details of design as it would in a design-build project.

*Handbook of Survey Methodology for the Social Sciences* Lior Gideon, 2012-06-21. Surveys enjoy great ubiquity among data collection methods in social research; they are flexible in questioning techniques, in the amount of questions asked, in the topics covered and in the various ways of interactions with respondents. Surveys are also the preferred method by many researchers in the social sciences due to their ability to provide quick profiles and results. Because they are so commonly used and fairly easy to administer, surveys are often thought to be easily thrown together. But designing an effective survey that yields reliable and valid results takes more than merely asking questions and waiting for the answers to arrive. Geared to the non-statistician, the

Handbook of Survey Methodology in Social Sciences addresses issues throughout all phases of survey design and implementation. Chapters examine the major survey methods of data collection providing expert guidelines for asking targeted questions improving accuracy and quality of responses while reducing sampling and non sampling bias. Relying on the Total Survey Error theory various issues of both sampling and non sampling sources of error are explored and discussed. By covering all aspects of the topic the Handbook is suited to readers taking their first steps in survey methodology as well as to those already involved in survey design and execution and to those currently in training. Featured in the Handbook: The Total Survey Error sampling and non sampling errors Survey sampling techniques The art of question phrasing Techniques for increasing response rates A question of ethics what is allowed in survey research Survey design face to face phone mail e mail online computer assisted Dealing with sensitive issues in surveys Demographics of respondents implications for future survey research Dealing with nonresponse and nonresponse bias. The Handbook of Survey Methodology in Social Sciences offers how to clarity for researchers in the social and behavioral sciences and related disciplines including sociology criminology criminal justice social psychology education public health political science management and many other disciplines relying on survey methodology as one of their main data collection tools.

**Handbook of Recycled Concrete and Demolition Waste** F. Pacheco-Torgal, Yining Ding, 2013-09-30 The civil engineering sector accounts for a significant percentage of global material and energy consumption and is a major contributor of waste material. The ability to recycle and reuse concrete and demolition waste is critical to reducing environmental impacts in meeting national regional and global environmental targets. Handbook of recycled concrete and demolition waste summarises key recent research in achieving these goals. Part one considers techniques for managing construction and demolition waste including waste management plans ways of estimating levels of waste the types and optimal location of waste recycling plants and the economics of managing construction and demolition waste. Part two reviews key steps in handling construction and demolition waste. It begins with a comparison between conventional demolition and construction techniques before going on to discuss the preparation refinement and quality control of concrete aggregates produced from waste. It concludes by assessing the mechanical properties strength and durability of concrete made using recycled aggregates. Part three includes examples of the use of recycled aggregates in applications such as roads pavements high performance concrete and alkali activated or geopolymers cements. Finally the book discusses environmental and safety issues such as the removal of gypsum asbestos and alkali silica reaction ASR concrete as well as life cycle analysis of concrete with recycled aggregates. Handbook of recycled concrete and demolition waste is a standard reference for all those involved in the civil engineering sector as well as academic researchers in the field.
