

5.2. Validating the database and its backup

You should regularly use either Sybase Control, SQL, or the official command line utility to validate a backup of your database in read-only mode, and, if errors are found, make repairs against the original database. *Never* make changes to a backup database! To read more about validation, see "Validating a database" and "Validating a transaction log" under the Backup and Data Recovery chapter of the Adaptive Server Anywhere User's Guide.

5.3. Recovering the database

Depending on the way your database and its backups are set up, and the status of your files after a media failure, there are several possible processes involved in how you go about recovering data. For information on how to recover data in various situations, see the Backup and Data Recovery chapter of the Adaptive Server Anywhere User's Guide.
