Scarcity and Conflict in African River Basins Mahlakeng Khosi Mahlakeng, 2023-03-31 The book presents a critical and comparative analysis of the hydropolitical landscape of African transboundary river basins which for much of the past century have been affected by water scarcity. River and lake basins can become a source of tension and conflict due to a complicated mix of environmental, demographic, diplomatic, historical and geopolitical factors. This book, however, specifically focuses on the important and often underlooked role played by scarcity in generating or exacerbating conflicts in shared river basins. Asserting that transboundary river basins tie states into a web of interdependence, this book raises awareness of how water scarcity or the depletion of water resources complicates this relationship as nations are forced to look beyond their own borders to meet the demand for water to satisfy multiple needs. Taking a comparative approach, it examines three shared basins: the Orange-Senqu, the Nile and the Niger River basins. While situated in different regions, all three basins are marked by serious environmental challenges that are detrimental to combustible hydropolitics over such shared water resources and they provide fascinating insights into the links between climate variability and change, water resources, human security, conflict, adaptation and regime capacity. Overall, this book argues that conflict over transboundary resources can be

prevented given the establishment of norms rules and the role of external actors that help regulate state behaviour and control their impacts This book will be of great interest to students and scholars of water resource management hydropolitics environmental conflict resource scarcity and international relations It will also be of interest to policymakers involved in transboundary water resource governance **Biodiversity Litigation** Guillaume Futhazar,Sandrine Maljean-Dubois,Jona Razzaque,2023 This book promotes the concept of Biodiversity Litigation as a common notion of environmental law and investigates litigation in a variety of countries and from various perspectives It opens the space for more creative legal thinking when dealing with and analysing biodiversity related disputes **Water Management in Megacities** Cecilia Tortajada,Olli Varis,Asit K. Biswas,Jan Lundqvist,2013-09-13 Efficient and equitable water wastewater and stormwater management for the megacities is becoming an increasingly complex task The special issue will focus on water management in its totality for megacities including their technical social economic legal institutional and environmental dimensions through a series of specially invited case studies from different megacities of the world At present around one out of two of the earth s 6 3 billion people live in urban areas Each year the world population grows by around 80 millions Practically all of this growth is urban primarily due to migration World s urban population is expected to reach 5 billion by 2030 which is nearly 2 3rd more than in 2000 and would mean that 60% of world s population will live in urban areas The case studies analysed include some of the most interesting and challenging megacities of this planet Dhaka Istanbul Jakarta Johannesburg M xico City Riyadh and S o Paulo They assess different aspects of how water is intermingled in the overall development milieu The special issue will considers the magnitudes nature and extent of the present and future challenges and how these could be meet in socially acceptable and cost effective ways The contributors are all acknowledged water experts from different parts of the world This book was previously published as a special issue of the International Journal of Water Resource s Development **Lesser Flamingos** Lothar Krienitz,2018-12-31 This book provides insights into the fascinating life of the Lesser Flamingo *Phoeniconaias minor* and describes how this enigmatic bird has adapted to the extreme conditions of tropical soda lakes and can even withstand the caustic effects of brine However humans are increasingly disrupting the natural cycles of these wetlands and for these pink birds characteristic of these salt lakes it is becoming more and more difficult to find suitable habitats food and breeding grounds Their fate is considered a cautionary example of man s dealings with nature Will the Lesser Flamingo survive in a man made world Flamingos are considered to be an embodiment of the Phoenix and the author interweaves his personal experiences with and observations of the flamingos unusual habitats with the Phoenix motif in order to stimulate reflection on the circle of life Written in an accessible style that combines science biological information and the author s own travels and fieldwork the book also includes a wealth of captivating images As such it offers a unique resource for biologists and nature loving Africa and Asia enthusiasts alike **Ecological Informatics** Friedrich Recknagel,William K. Michener,2017-09-21 This book introduces readers to ecological informatics as

an emerging discipline that takes into account the data intensive nature of ecology the valuable information to be found in ecological data and the need to communicate results and inform decisions including those related to research conservation and resource management At its core ecological informatics combines developments in information technology and ecological theory with applications that facilitate ecological research and the dissemination of results to scientists and the public Its conceptual framework links ecological entities genomes organisms populations communities ecosystems landscapes with data management analysis and synthesis and communicates new findings to inform decisions by following the course of a loop In comparison to the 2nd edition published in 2006 the 3rd edition of Ecological Informatics has been completely restructured on the basis of the generic conceptual framework provided in Figure 1 It reflects the significant advances in data management analysis and synthesis that have been made over the past 10 years including new remote and in situ sensing techniques the emergence of ecological and environmental observatories novel evolutionary computations for knowledge discovery and forecasting and new approaches to communicating results and informing decisions **ECMLG**
