Critical Minerals, Sustainability, and the Energy Transition in the Global South Susan Nakanwagi, 2024-11-14 This book addresses the relationship between efficient management of critical minerals and sustainability in the Global South, including Sub-Saharan Africa. Critical minerals are essential raw materials for the technologies that are pivotal in today's energy transition. However, critical mineral host states and communities face social, economic, ecological, political, technological and governance injustices. The book contends that the criteria currently used in assessing criticality and critical mineral development do not fulfil the sustainable development ambitions of developing countries and that broader considerations must be taken into account to include the stakeholders involved as well as the spatial dimension of the critical mineral value chain. In particular, the book argues that the law must consider the broader context in which minerals become critical to particular processes. It positions this argument within the current context of climate change, the just energy transition, the minerals energy nexus and geopolitical tensions. By analysing the copper-cobalt value chain through case studies on DRC, Zambia, China and the EU, the book provides new avenues for critical mineral development and acknowledges the necessity for sustainability amidst the exacerbated impacts of climate change. Addressing a key challenge of the global energy transition, the book argues for a just holistic framework which includes parameters such as domestic value addition, human rights in business development, environmental sensitivity, the development of communication channels from remote marginalised communities to international policymakers and the re-designing of criticality considerations beyond supply and economic aspects.

Development and Testing of Vehicle Software and its Influence on Sustainable Transport Antonio Colmenar-Santos, David Borge-Diez, Pedro-Miguel Ortega-Cabezas, 2024-01-10

This book evaluates the contributions of the electronic control unit software of an electric vehicle on sustainability and society such as the reduction of emissions during a product design and the improvements in the vehicle. Therefore, software validation and development have a significant impact on sustainability. This book offers innovative validation solutions based on artificial intelligence techniques to reduce validation time and emissions. The impact of driving efficiency on sustainable transport models is studied in detail, making proposals to be considered in the current environmental policies under discussion within the European Union in order to improve the sustainability of transport models. Vehicles are becoming sophisticated electronic systems due to the fact that they are integrating a significant number of electronic control units. This trend will certainly continue in the year to come. Consequently, software validation techniques are a key element for car manufacturers in order to ensure the quality of the vehicle. This book contributes to these efforts.
