What is V-REP?

V-REP is a simulator which is based on distributed control architecture: each object/model can be individually controlled via an embedded script, a plugin, a ROS node, a remote API client, or a custom solution. V-REP is very versatile and ideal simulation software for various applications like simulation of factory automation systems, Remote monitoring, Hardware control, Robot related education etc. V-REP can be used as a stand-alone application or can easily be embedded into a main client application; its small footprint and elaborate API makes V-REP an ideal candidate to embed into higher-level applications.
