Evolution and Psychology Scott A. MacDougall-Shackleton, 2023-12-20 Evolution and Psychology is a critical exploration of how evolutionary approaches can be used to understand the human mind and behaviour. Written for undergraduate students in the social sciences, this text provides an accessible introduction to foundational concepts in evolutionary biology. It then explores evolutionary perspectives on key psychological topics such as cognition, development, group dynamics, mate choice, language, and communication, psychopathology, and culture. An interdisciplinary approach is woven throughout, integrating evolutionary psychology with insights from behavioural ecology, anthropology, genetics, and neuroscience. You will learn to think critically about evolutionary explanations with Warning Flag features throughout the text that address frequently misunderstood topics, common fallacies, and historical misuses and abuses of applying evolutionary theory to human behaviour. This is an essential read for students of Evolutionary Psychology and anyone looking for a contemporary overview of this complex and captivating field. Scott A. MacDougall-Shackleton is Professor of Psychology at Western University.

**The Light and Smith Manual** Sol Fely Light, 2007 An immensely useful manual with many attractive features: comprehensive and lucid keys, precise diagrams, annotated checklists, and up-to-date references. There is no doubt that it should be seen as an example of the type of manual which is so badly needed in the study of the fauna of many shores around the world. *Journal of Animal Ecology*. Congratulations to the editors, contributors, and publisher for a job well done. The third edition has been rewritten, corrected, and enlarged so that while retaining the basic organization of the earlier ones, it is more useful, informative, and up-to-date. The meticulous scholarship of Smith and Carlton is just what the revision needed. *Systematic Zoology*. This revision should serve for many years. It is therefore particularly commendable that the editing has been meticulous, perhaps flawless. Thanks are due to the many contributors for a job well done. *The Quarterly Review of Biology*. As the Pacific Coast intertidal zone undergoes increasingly profound changes, knowing the sentinel invertebrates can foretell the future of the sea and hence of our species. Jim Carlton's hefty new update of *The Light and Smith Manual*, the comprehensive compendium of who's who between the tides, is the best and quickest way to do so. Elliot A. Norse, President, Marine Conservation Biology Institute. This much-anticipated modernization of Light's Manual is an astonishing accomplishment, blending state-of-the-art taxonomy with profusely illustrated and user-friendly keys to who's whom on marine shores from its stated boundaries of mid-California.

through Oregon and clearly much further north. It's also an informative, well-referenced read. Marine biologists should not leave home without it. Robert Paine, Professor Emeritus of Biology, University of Washington. At this time of environmental change and loss of biodiversity, species identification has never been more important. The fourth edition of Light and Smith is more than just a field guide; it is a masterwork of research and description with a strong focus on morphological detail. No other book has such a broad scope, newly expanded to include even the most obscure taxa. The revised keys and beautiful anatomical illustrations make this classic guide more indispensable than ever. As taxonomists become extinct, there are fewer students to receive the vast body of knowledge accumulated by generations of careful study. I hope that the beauty and depth of this guide will inspire a generation of young scientists to continue this critical taxonomic work. It will have a place of honor in all marine labs. Paul K. Dayton, Scripps Institution of Oceanography.
