Bard Ermentrout,David H. Terman,2010-07-01 This book applies methods from nonlinear dynamics to problems in neuroscience It uses modern mathematical approaches to understand patterns of neuronal activity seen in experiments and models of neuronal behavior The intended audience is researchers interested in applying mathematics to important problems in neuroscience and neuroscientists who would like to understand how to create models as well as the mathematical and computational methods for analyzing them The authors take a very broad approach and use many different methods to solve and understand complex models of neurons and circuits They explain and combine numerical analytical dynamical systems and perturbation methods

to produce a modern approach to the types of model equations that arise in neuroscience There are extensive chapters on the role of noise multiple time scales and spatial interactions in generating complex activity patterns found in experiments The early chapters require little more than basic calculus and some elementary differential equations and can form the core of a computational neuroscience course Later chapters can be used as a basis for a graduate class and as a source for current research in mathematical neuroscience The book contains a large number of illustrations chapter summaries and hundreds of exercises which are motivated by issues that arise in biology and involve both computation and analysis Bard Ermentrout is Professor of Computational Biology and Professor of Mathematics at the University of Pittsburgh David Terman is Professor of Mathematics at the Ohio State University

**Bioelectric and Biomagnetic Fields** Leonid I. Titomir, Peter Kneppo, 1994-06-27 Bioelectric and Biomagnetic Fields Theory and Applications in Electrocardiology begins with a general description of the development of extracellular bioelectric and biomagnetic fields and the methods used in their analysis and measurement The most effective electrodynamic models and most modern approaches to topographical synchronous multilead measurements of the field are reviewed The next section discusses the major approaches to analysis of the inverse problem with a detailed description of multipole technique applied to the bioelectric and biomagnetic fields measured on or near the body surface Special emphasis is placed on the interrelationship between the electric and magnetic fields of the same bioelectric generator The last section explains the new approaches to chronotopographical representation of the electrophysiological characteristics deduced from the parameters of the bioelectric generator The text includes the most recent experimental protocols and results from studies in electro and magnetocardiology and electro and magnetoneurology
