Prototype to Clinical Workflow: Moving Machine Learning for Lesion Quantification into Neuroradiological Practice Raphael Meier, Jayashree Kalpathy-Cramer, Susanne Wegener, Benedikt Wiestler, Richard McKinley, Spyridon Bakas, 2022-08-02

Informatics in Medical Imaging George C. Kagadis, Steve G. Langer, 2011-10-17 Informatics in Medical Imaging provides a comprehensive survey of the field of medical imaging informatics. In addition to radiology, it also addresses other specialties such as pathology, cardiology, dermatology, and surgery, which have adopted the use of digital images. The book discusses basic imaging informatics protocols, picture archiving and communication systems, and the electronic medical record. It details key instrumentation and data mining technologies used in medical imaging informatics, as well as practical operational issues such as procurement, maintenance, teleradiology, and ethics. Highlights: Introduces the basic ideas of imaging informatics, the terms used, and how data are represented and transmitted. Emphasizes the fundamental communication paradigms HL7, DICOM, and IHE. Describes information systems typically used within imaging departments: orders and result systems, acquisition systems, reporting systems, archives, and information display systems. Outlines the principal components of modern computing networks and storage systems. Covers the technology and principles of display and acquisition detectors and rounds out with a discussion of other key computer technologies. Discusses procurement and maintenance issues, ethics, and its relationship to government initiatives like HIPAA and constructs beyond radiology. The technologies of medical imaging and radiation therapy are so complex and computer driven that it is difficult for physicians and technologists responsible for their clinical use to know exactly what is happening at the point of care. Medical physicists are best equipped to understand the technologies and their applications, and these individuals are assuming greater responsibilities in the clinical arena to ensure that intended care is delivered in a safe and effective manner. Built on a foundation of classic and cutting edge research, Informatics in Medical Imaging supports and updates medical physicists functioning at the intersection of radiology and radiation.

Health Information Technology Evaluation

Handbook Vitaly Herasevich, MD, PhD, MSc, Brian W. Pickering, MD, MSc, 2021-11-18 Governments and clinical providers are investing billions of dollars in health information technologies HIT This is being done with the expectation that HIT adoption will translate into healthier patients experiencing better care at lower cost In the initial push to roll out HIT the reliability of these claims was often not substantiated by systematic evaluation and testing As the first wave of widespread adoption of HIT comes to an end and the next wave begins it is more important than ever that stakeholders evaluate the results of their investment evaluate their success or failure and make decisions about future directions Structured evaluations of a project s impact are an essential element of the justification for investment in HIT A systematic approach to evaluation and testing should allow for comparison between different HIT interventions with the goal of identifying and promoting those which improve clinical care or other outcomes of interest The question of the day is no longer why perform evaluations but how to perform evaluations This updated book provides an easy to read reference outlining the basic concepts theory and methods required to perform a systematic evaluation of HIT Chapters cover key domains of HIT evaluation study structure and design measurement fundamentals results analysis communicating results guidelines development and reference standards Updated case studies and examples are included demonstrating the successes or failures of these investments The authors also include new initiatives put in place by the government and discuss how they are being adopted and used by health systems Glaucoma Research and Clinical Advances P.A.
