

Theory of Knowledge (TOK)

The statement, “present knowledge is wholly dependent on past knowledge,” might be accurate or not depending on the angle of examination. In this case, the accuracy of the statement emerges from the understanding that past information gives clues about many aspects of present details. The converse of the statement also holds. However, establishing a clear viewpoint of the statement requires the development of a distinction between past and present. Although this might present significant dilemmas, the ideal way to establish this is to conduct a research, focusing on the knowledge gaps that present the understanding of the information. The analysis of the statement will dwell on two significant areas of knowledge, which include chemistry and biodiversity.

In the field of natural sciences, present ideas are built up from the past details available on the subject. For instance, the chemistry that scholars learn and research today emerged from alchemy, which recognizes the concept of turning metal into gold by human beings (Webb, 2015). This follows that without alchemy, it is unlikely that chemistry would have come into the limelight. The development of chemistry into an independent area of knowledge gives credit to alchemy. One scholar that contributed to the development of alchemy into chemistry include Boyle. His contribution was through the giving insights into the process of changing the alchemy during the time into chemistry, while developing an experimental method in physics. He considered the two fields as deserving some attention in equal measure, hence borrowing from physicals to build up the chemistry discipline. The experimental method in physics gained significance in chemistry, proving the statement from this noble dimension.

Biodiversity, as another area of knowledge, depends on past information to bring insights into the current developments. For instance, in the conservation of biodiversity, data

McWhorter, 2018-05-17 Creoles have long been the subject of debate in linguistics with many conflicting views both on how they are formed and what their political and linguistic status should be. Indeed over the past twenty years some creole specialists have argued that it has been wrong to think of creoles as anything but language blends in the same way that Yiddish is a blend of German and Hebrew and Slavic. Here John H. McWhorter debunks the most widely accepted idea that creoles are created in the same way as children taking characteristics from both parent languages and its underlying assumption that all historical and biological processes are the same. Instead the facts support the original and more interesting argument that creoles are their own unique entity and are among the world's only genuinely new languages.

Monsters of Film, Fiction, and Fable Lisa Wenger Bro, Mary Ann Gareis, Crystal O'Leary-Davidson, 2018-07-27 Monsters are a part of every society and ours is no exception They are deeply embedded in our history our mythos and our culture However treating them as simply a facet of children's stories or escapist entertainment belittles their importance When examined closely we see that monsters have always represented the things we fear that which is different which we can't understand which is dangerous which is Other But in many ways monsters also represent our growing awareness of ourselves and our changing place in a continually shrinking world Contemporary portrayals of the monstrous often have less to do with what we fear in others than with what we fear about ourselves what we fear we might be capable of The nineteen essays in this volume explore the place and function of the monstrous in a variety of media stories and novels like Baum's Oz books or Gibson's Neuromancer television series and feature films like The Walking Dead or Edward Scissorhands and myths and legends like Beowulf and The Loch Ness Monster in order to provide a closer understanding of not just who we are and who we have been but also who we believe we can be for better or worse
