[With the Other](#) Avi Sagi, 2019-01-13 The book grapples with one of the most difficult questions confronting the contemporary world the problem of the other which includes ethical political and metaphysical aspects A widespread approach in the history of the discourse on the other systematically formulated by Emmanuel Levinas and his followers has invested this term with an almost mythical quality the other is everybody else but never a specific person an abstraction of historical human existence This book offers an alternative view turning the other into a real being through a carefully described process involving two dimensions referred to as the ethic of loyalty to the visible and the ethic of inner retreat Tracing the course of this process in life and in literature the book presents a broad and lucid picture intriguing to philosophers and also accessible to readers concerned with questions touching on the meaning of life ethics and politics and particularly relevant to the burning issues surrounding attitudes to immigrants as others and to the relationship with God the ultimate other **A**

Taillard, 2022-10-29 This open access book demonstrates all the steps required to design heuristic algorithms for difficult optimization The classic problem of the travelling salesman is used as a common thread to illustrate all the techniques discussed This problem is ideal for introducing readers to the subject because it is very intuitive and its solutions can be graphically represented The book features a wealth of illustrations that allow the concepts to be understood at a glance The book approaches the main metaheuristics from a new angle deconstructing them into a few key concepts presented in separate chapters construction improvement decomposition randomization and learning methods Each metaheuristic can then be presented in simplified form as a combination of these concepts This approach avoids giving the impression that metaheuristics is a non formal discipline a kind of cloud sculpture Moreover it provides concrete applications of the travelling salesman problem which illustrate in just a few lines of code how to design a new heuristic and remove all

ambiguities left by a general framework Two chapters reviewing the basics of combinatorial optimization and complexity theory make the book self contained As such even readers with a very limited background in the field will be able to follow all the content
