Materials Characterisation D.O. Northwood, T. Rang, J. De Hossen, C. A. Brebbia, 2018-03-27 Containing selected papers on Materials Characterisation this volume presents the latest research in the field Material and contact characterisation is a rapidly advancing field that requires the application of a combination of numerical and experimental methods Contributions come from both industry and research communities using computational methods and performing experiments Demand for high quality production from both industry and consumers has led to rapid developments in materials science and engineering

Current research is focussed on modification technologies that can increase the surface durability of materials. The characteristics of the system reveal which surface engineering methods should be chosen and as a consequence it is essential to study the combination of surface treatment and contact mechanics. The accurate characterisation of the physical and chemical properties of materials requires the application of both experimental techniques and computer simulation methods in order to gain a correct analysis. A very wide range of materials starting with metals through polymers and semiconductors to composites necessitates a whole spectrum of characteristic experimental techniques and research methods. The papers in this book examine various combinations of techniques across various topics. Frontiers in Offshore Geotechnics III

Vaughan Meyer, 2015-05-15 Frontiers in Offshore Geotechnics III comprises the contributions presented at the Third International Symposium on Frontiers in Offshore Geotechnics ISFOG Oslo Norway 10-12 June 2015 organised by the Norwegian Geotechnical Institute NGI. The papers address current and emerging geotechnical engineering challenges facing those working in off-shore. Service Handbook of the 155-mm Howitzer Matériel, Model of 1918 (Schneider), 1920

Troubleshooting Finite-Element Modeling with Abaqus Raphael Jean Boulbes, 2019-09-06 This book gives Abaqus users who make use of finite element models in academic or practitioner based research the in depth program knowledge that allows them to debug a structural analysis model. The book provides many methods and guidelines for different analysis types and modes that will help readers to solve problems that can arise with Abaqus if a structural model fails to converge to a solution. The use of Abaqus affords a general checklist approach to debugging analysis models which can also be applied to structural analysis. The author uses step by step methods and detailed explanations of special features in order to identify the solutions to a variety of problems with finite element models. The book promotes a diagnostic mode of thinking concerning error messages, better material definition and the writing of user material subroutines work with the Abaqus mesher and best practice in doing so, the writing of user element subroutines and contact features with convergence issues and consideration of hardware and software issues and a Windows HPC cluster solution. The methods and information provided facilitate job diagnostics and help to obtain converged solutions for finite element models regarding structural component assemblies in static or dynamic analysis. The troubleshooting advice ensures that these solutions are both high quality and cost effective according to practical experience. The book offers an in depth guide for students learning about Abaqus as each problem and solution are complemented by examples and straightforward explanations. It is also useful for academics and structural engineers wishing to debug Abaqus models on the basis of error and warning messages that arise during finite element modelling processing. **Essentials of Offshore Structures** D.V.
