Introduction Prescribing errors occur in approximately 6% of all paediatric prescriptions, many with significant consequences. Four years ago, pharmacist-led teaching on safe, effective prescribing for children was introduced to the Child Health undergraduate module at Nottingham University Medical School. A year later a 'real life' paediatric prescribing examination was introduced into the module assessment. We aimed to evaluate the impact of this teaching during standardised student assessments.

Methods Immediately prior to starting the Child Health module at the start of their Clinical Phase 2 year (4th year), ninety undergraduate medical students were given 15 minutes to complete a prescribing exercise. Provided with a hospital inpatient drug chart and a copy of the BNF for Children, the students were asked to prescribe two regular medications and IV maintenance fluid for a paediatric patient. Students received safe prescribing and therapeutics teaching from pharmacists during the ten week module and were subsequently required to repeat a similar prescribing exercise as part of the assessment for the course. In order to test retention, seventy final year students (after final exams) took the same prescribing exercise. All three prescribing tasks were marked by the same Paediatric Pharmacist (using a standardised marking scheme) and a total of ten marks were available in each case.
