Operations Research

Introduction & History of Operations Research

Any problem that requires a positive decision to be made can be classified as an operations research (O.R.) type problem. However, the approach used in decision making has changed considerably over the years. Although OR problems have existed since the creation of man, it was in 1885 when Ferderick W. Taylor emphasized the application of scientific analysis to methods of production; then the real start took place. The name (O.R.) probably came from a programme under taken by Great Britain during World War II "research in military operations". It was during the early part of the war that Great Britain brought together a group of specialists from a number of areas to work on the military defense of their country. The work of this first O.R. group involved, among other things, studies to determine the best use of air power and the newly invented Radar. Because of the success of O.R. in military operations, it quickly spread to all phases of industry and Government. By 1951, O.R. had taken its place as a distinct science in the United States. Hence it is said that O.R. is the art of winning war without actually fighting it.

Operations Research in India

In India O.R. society founded in 1959, also became a member of international Federation of OR Societies in 1959. The Journal OPSEARCH was published for the first time in 1963. Now O.R. techniques are used in almost all walks of our life and OR is emerging as an inter-disciplinary area of knowledge that can make contribution to the solution of the problems in diversified areas of interest. There is too much impact of O.R. in economics, management, engineering and other social and behavior sciences.

Industries in India are also becoming conscious of the role of operations research and a good number of them have well trained OR teams. Some of Indian organizations using OR techniques are Indian Airlines, Railways, Defence Organizations, TATA, TELCO, DCM, STC etc. Assignment Models have been used by Kirloskar company for allocation of their salesmen to different areas so as to maximize the profits. DCM, Calico, and Binnys' have been using linear programming techniques for cotton blending. Many
