

INSTRUMENTS AND CONTROLS

LP Gas Engine Tractors

SAFETY RELIEF VALVE

The relief valve is a safety device to protect the tank from excessive vapor pressure due to excessive heat. It allows vapor in the tank to escape should the pressure in the tank rise above 312 pounds per square inch. It will reset itself automatically, when the tank pressure returns to normal.

VAPOR RETURN VALVE

The vapor return valve is used to connect the vapor space in the tractor tank with the vapor space in the storage tank. This equalizes the pressure in the two tanks, permitting transfer of fuel by gravity or reducing the

pump pressure required to transfer fuel. A built-in excess flow valve closes if the flow through the valve becomes excessive. A screw cap (with attached chain) is also provided to exclude dirt.

VAPOR AND LIQUID SERVICE VALVES

Internal tank piping delivers vapor from the top of the tank to the vapor service valve. Liquid from the bottom of the tank is delivered to the liquid service valve. External fuel lines connect both valves to the inlet port of the fuel filter. Both service valves have excess flow valves which close if the flow through them becomes excessive.
