Gopalakrishnan, 2004-09-01 This volume constitutes the proceedings of the 17th International Conference on Theorem Proving in Higher Order Logics TPHOLs 2004 held September 14 17 2004 in Park City Utah USA TPHOLs covers all aspects of theorem proving in higher order logics as well as related topics in theorem proving and veri cation There were 42 papers submitted to TPHOLs 2004 in the full research ca gory each of which was refereed by at least 3 reviewers selected by the program committee Of these submissions 21 were accepted for presentation

at the conference and publication in this volume. In keeping with longstanding tradition TPHOLs 2004 also offered a venue for the presentation of work in progress where researchers invited discussion by means of a brief introductory talk and then discussed their work at a poster session. A supplementary proceedings containing papers about in progress work was published as a 2004 technical report of the School of Computing at the University of Utah. The organizers are grateful to Al Davis, Thomas Hales and Ken McMillan for agreeing to give invited talks at TPHOLs 2004. The TPHOLs conference traditionally changes continents each year in order to maximize the chances that researchers from around the world can attend.

Languages and Compilers for Parallel Computing Guang R. Gao, Lori Pollock, John Cavazos, Xiaoming Li, 2010-06-10. It is our pleasure to present the papers accepted for the 22nd International Workshop on Languages and Compilers for Parallel Computing held during October 8-10, 2009 in Newark, Delaware, USA. Since 1986 LCPC has become a valuable venue for researchers to report on work in the general area of parallel computing, high performance computer architecture and compilers. LCPC 2009 continued this tradition and in particular extended the area of interest to new parallel computing accelerators such as the IBM Cell Processor and Graphic Processing Unit (GPU). This year we received 52 submissions from 15 countries. Each submission received at least three reviews and most had four. The PC also sought additional external reviews for contentious papers. The PC held an all-day phone conference on August 24 to discuss the papers. PC members who had a conflict of interest were asked to leave the call temporarily when the corresponding papers were discussed. From the 52 submissions the PC selected 25 full papers and 5 short papers to be included in the workshop proceedings, representing a 58% acceptance rate. We were fortunate to have three keynote speeches, a panel discussion and a tutorial in this year's workshop. First, Thomas Sterling, Professor of Computer Science at Louisiana State University, gave a keynote talk titled "HPC in Phase Change: Towards a New Parallel Execution Model". Sterling argued that a new multi-dimensional research thrust was required to realize the design goals with regard to power, complexity, clock rate and reliability in the new parallel computer systems. ParalleX, an exploratory execution model developed by Sterling's group, was introduced to guide the co-design of new architectures, programming methods and system software.

Digital Signal Processing Paulo S. R. Diniz, Eduardo A. B. da Silva, Sergio L. Netto, 2002-04-18. Digital signal processing lies at the heart of the communications revolution and is an essential element of key technologies such as mobile phones and the Internet. This book covers all the major topics in digital signal processing: DSP design and analysis supported by MATLAB examples and other modelling techniques. The authors explain clearly and concisely why and how to use digital signal processing systems: how to approximate a desired transfer function characteristic using polynomials and ratio of polynomials; why an appropriate mapping of a transfer function on to a suitable structure is important for practical applications; and how to analyse, represent and explore the trade-off between time and frequency representation of signals. An ideal textbook for students, it will also be a useful reference for engineers working on the development of signal processing systems.

Visualization of Physical Phenomena Nicholas M. Patrikalakis, 2012-12-06 Scientific Visualization of Physical Phenomena reflects the special emphasis of the Computer Graphics Society's Ninth International Conference held at the MIT in Cambridge Massachusetts USA in June 1991. This volume contains the proceedings of the conference which since its foundation in 1983 continues to attract high quality research articles in all aspects of Computer Graphics and its applications. Visualization in science and engineering is rapidly developing into a vital area because of its potential for significantly contributing to the understanding of physical processes and the design automation of man made systems. With the increasing emphasis in handling complicated physical and artificial processes and systems and with continuing advances in specialized graphics hardware and processing software and algorithms visualization is expected to play an increasingly dominant role in the foreseeable future.

Control Performance Management in Industrial Automation Mohieddine Jelali, 2012-10-31 Control Performance Management in Industrial Automation provides a coherent and self contained treatment of a group of methods and applications of burgeoning importance to the detection and solution of problems with control loops that are vital in maintaining product quality operational safety and efficiency of material and energy consumption in the process industries. The monograph deals with all aspects of control performance management CPM from controller assessment minimum variance control based and advanced methods to detection and diagnosis of control loop problems process non linearities oscillations actuator faults to the improvement of control performance maintenance re design of loop components automatic controller re tuning. It provides a contribution towards the development and application of completely self contained and automatic methodologies in the field. Moreover within this work many CPM tools have been developed that goes far beyond available CPM packages. Control Performance Management in Industrial Automation presents a comprehensive review of control performance assessment methods develops methods and procedures for the detection and diagnosis of the root causes of poor performance in complex control loops covers important issues that arise when applying these assessment and diagnosis methods recommends new approaches and techniques for the optimization of control loop performance based on the results of the control performance stage and offers illustrative examples and industrial case studies drawn from chemicals building mining pulp and paper mineral and metal processing industries. This book will be of interest to academic and industrial staff working on control systems design maintenance or optimisation in all process industries.
